GA-Z68AP-D3

User's Manual

Declaration of Conformity
We, Manufacturer/Importer
(full address)

G.B.T. Technology Trading GMbH
Bullenkoppel 16, 22047 Hamburg, Germany

declare that the product
Motherboard
GA-Z68AP-D3

is in conformity with
(reference to the specification under which conformity is declared)
in accordance with the EMC Directive 2004/108/E

(description of the apparatus, system, installation to which it refers)

☐ **EN 55011**	Limits and methods of measurement of radio disturbance characteristics of industrial, scientific and medical (ISM) high frequency equipment	☒ **EN 61000-3-2** Disturbances in supply systems caused ☒ **EN 61000-3-3** Disturbances in supply systems caused by household appliances and similar electrical equipment "Voltage fluctuations"
☐ **EN 55013**	Limits and methods of measurement of radio disturbance characteristics of broadcast receivers and associated equipment	☒ **EN 55024** Information Technology equipment-Immunity characteristics-Limits and methods of measurement
☐ **EN 55014-1**	Limits and methods of measurement of radio disturbance characteristics of household electrical appliances, portable tools and similar electrical apparatus	☐ **EN 50082-1** Generic immunity standard Part 1: Residual, commercial and light industry ☐ **EN 50082-2** Generic immunity standard Part 2: Industrial environment
☐ **EN 55015**	Limits and methods of measurement of radio disturbance characteristics of fluorescent lamps and luminaries	☐ **EN 55014-2** Immunity requirements for household appliances tools and similar apparatus
☐ **EN 55020**	Immunity from radio interference of broadcast receivers and associated equipment	☐ **EN 50091- 2** EMC requirements for uninterruptible power systems (UPS)
☒ **EN 55022**	Limits and methods of measurement of radio disturbance characteristics of information technology equipment	
☐ **DIN VDE 0855** ☐ **part 10** ☐ **part 12**	Cabled distribution systems; Equipment for receiving and/or distribution from sound and television signals	
☒ **CE marking**		CE (EC conformity marking)
☐ **EN 60065**	Safety requirements for mains operated electronic and related apparatus for household and similar general use	☒ **EN 60950** Safety for information technology equipment including electrical business equipment
☐ **EN 60335**	Safety of household and similar electrical appliances	☐ **EN 50091-1** General and Safety requirements for uninterruptible power systems (UPS)

The manufacturer also declares the conformity of above mentioned product with the actual required safety standards in accordance with the LVD Directive 2006/95/EC

DECLARATION OF CONFORMITY
Per FCC Part 2 Section 2.1077(a)

Responsible Party Name: G.B.T. INC. (U.S.A.)

Address: 17358 Railroad Street

City of Industry, CA 91748

Phone/Fax No: (818) 854-9338/ (818) 854-9339

hereby declares that the product

Product Name: Motherboard

Model Number: GA-Z68AP-D3

Conforms to the following specifications:

FCC Part 15, Subpart B, Section 15.107(a) and Section 15.109

(a).Class B Digital Device

Supplementary Information:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful and (2) this device must accept any inference received, including that may cause undesired operation.

Representative Person's Name: ERIC LU

Signature: *Eric Lu*

Date: May 31, 2011

Documentation Classifications

In order to assist in the use of this product, GIGABYTE provides the following types of documentations:

■   For quick set-up of the product, read the Quick Installation Guide included with the product.
■   For detailed product information, carefully read the User's Manual.

For product-related information, check on our website at:
http://www.gigabyte.com

Identifying Your Motherboard Revision

The revision number on your motherboard looks like this: "REV: X.X." For example, "REV: 1.0" means the revision of the motherboard is 1.0. Check your motherboard revision before updating motherboard BIOS, drivers, or when looking for technical information.
Example:

Table of Contents

Box Contents

☑ GA-Z68AP-D3 motherboard
☑ Motherboard driver disk
☑ User's Manual
☑ Quick Installation Guide
☑ Four SATA cables
☑ I/O Shield

The box contents above are for reference only and the actual items shall depend on the product package you obtain.
The box contents are subject to change without notice.

Optional Items

☐ 2-port USB 2.0 bracket (Part No. 12CR1-1UB030-5*R)
☐ 2-port SATA power cable (Part No. 12CF1-2SERPW-0*R)

Chapter 1   Hardware Installation

1-1   Installation Precautions

The motherboard contains numerous delicate electronic circuits and components which can become damaged as a result of electrostatic discharge (ESD). Prior to installation, carefully read the user's manual and follow these procedures:

- Prior to installation, do not remove or break motherboard S/N (Serial Number) sticker or warranty sticker provided by your dealer. These stickers are required for warranty validation.
- Always remove the AC power by unplugging the power cord from the power outlet before installing or removing the motherboard or other hardware components.
- When connecting hardware components to the internal connectors on the motherboard, make sure they are connected tightly and securely.
- When handling the motherboard, avoid touching any metal leads or connectors.
- It is best to wear an electrostatic discharge (ESD) wrist strap when handling electronic components such as a motherboard, CPU or memory. If you do not have an ESD wrist strap, keep your hands dry and first touch a metal object to eliminate static electricity.
- Prior to installing the motherboard, please have it on top of an antistatic pad or within an electrostatic shielding container.
- Before unplugging the power supply cable from the motherboard, make sure the power supply has been turned off.
- Before turning on the power, make sure the power supply voltage has been set according to the local voltage standard.
- Before using the product, please verify that all cables and power connectors of your hardware components are connected.
- To prevent damage to the motherboard, do not allow screws to come in contact with the motherboard circuit or its components.
- Make sure there are no leftover screws or metal components placed on the motherboard or within the computer casing.
- Do not place the computer system on an uneven surface.
- Do not place the computer system in a high-temperature environment.
- Turning on the computer power during the installation process can lead to damage to system components as well as physical harm to the user.
- If you are uncertain about any installation steps or have a problem related to the use of the product, please consult a certified computer technician.

1-2   Product Specifications

CPU	◆	Support for Intel® Core™ i7 processors/Intel® Core™ i5 processors/ Intel® Core™ i3 processors/Intel® Pentium® processors/Intel® Celeron® processors in the LGA1155 package (Go to GIGABYTE's website for the latest CPU support list.)
	◆	L3 cache varies with CPU
Chipset	◆	Intel® Z68 Express Chipset
Memory	◆	4 x 1.5V DDR3 DIMM sockets supporting up to 32 GB of system memory * Due to Windows 32-bit operating system limitation, when more than 4 GB of physical memory is installed, the actual memory size displayed will be less than 4 GB.
	◆	Dual channel memory architecture
	◆	Support for DDR3 2133/1866/1600/1333/1066 MHz memory modules
	◆	Support for non-ECC memory modules
	◆	Support for Extreme Memory Profile (XMP) memory modules (Go to GIGABYTE's website for the latest supported memory speeds and memory modules.)
Onboard Graphics	◆	Integrated in the Chipset: - 1 x HDMI port, supporting a maximum resolution of 1920x1200
Audio	◆	Realtek ALC889 codec
	◆	High Definition Audio
	◆	2/4/5.1/7.1-channel * To configure 7.1-channel audio, you have to use an HD front panel audio module and enable the multi-channel audio feature through the audio driver.
	◆	Support for S/PDIF Out
LAN	◆	1 x Realtek RTL8111E chip (10/100/1000 Mbit)
Expansion Slots	◆	1 x PCI Express x16 slot, running at x16 (PCIEX16) * For optimum performance, if only one PCI Express graphics card is to be installed, be sure to install it in the PCIEX16 slot.
	◆	1 x PCI Express x16 slot, running at x4 (PCIEX4) * The PCIEX4 slot shares bandwidth with the PCIEX1_2 and PCIEX1_3 slots. When the PCIEX1_2 slot or the PCIEX1_3 slot is populated, the PCIEX4 slot will operate at up to x1 mode.
	◆	3 x PCI Express x1 slots (All PCI Express slots conform to PCI Express 2.0 standard.)
	◆	2 x PCI slots
Multi-Graphics Technology	◆	Support for AMD CrossFireX™ technology * The PCIEX16 slot operates at up to x4 mode when AMD CrossFireX™ is enabled.

Storage Interface	◆	Chipset:
		- 2 x SATA 6Gb/s connectors (SATA3_0, SATA3_1) supporting up to 2 SATA 6Gb/s devices
		- 4 x SATA 3Gb/s connectors (SATA2_2~SATA2_5) supporting up to 4 SATA 3Gb/s devices
		* The SATA2_5 connector will become unavailable when the mSATA connector is installed with a solid state drive.
		- Support for RAID 0, RAID 1, RAID 5, and RAID 10
		* When a RAID set is built across the SATA 6Gb/s and SATA 3Gb/s channels, the system performance of the RAID set may vary depending on the devices being connected.
USB	◆	Chipset:
		- Up to 10 USB 2.0/1.1 ports (4 ports on the back panel, 6 ports available through the internal USB headers)
	◆	Etron EJ168 chip:
		- Up to 2 USB 3.0/2.0 ports on the back panel
Internal Connectors	◆	1 x 24-pin ATX main power connector
	◆	1 x 4-pin ATX 12V power connector
	◆	2 x SATA 6Gb/s connectors
	◆	4 x SATA 3Gb/s connectors
	◆	1 x mSATA connector
	◆	1 x CPU fan header
	◆	2 x system fan headers
	◆	1 x power fan header
	◆	1 x front panel header
	◆	1 x front panel audio header
	◆	1 x S/PDIF Out header
	◆	3 x USB 2.0/1.1 headers
	◆	1 x clearing CMOS jumper
	◆	1 x Trusted Platform Module (TPM) header
Back Panel Connectors	◆	1 x PS/2 keyboard/mouse port
	◆	1 x parallel port
	◆	1 x serial port
	◆	1 x optical S/PDIF Out connector
	◆	1 x HDMI port
	◆	4 x USB 2.0/1.1 ports
	◆	2 x USB 3.0/2.0 ports
	◆	1 x RJ-45 port
	◆	3 x audio jacks (Line In/Line Out/Microphone)
I/O Controller	◆	iTE IT8728 chip

Hardware Monitor	◆	System voltage detection
	◆	CPU/System temperature detection
	◆	CPU/System/Power fan speed detection
	◆	CPU overheating warning
	◆	CPU/System/Power fan fail warning
	◆	CPU/System fan speed control * Whether the CPU/system fan speed control function is supported will depend on the CPU/system cooler you install.
BIOS	◆	2 x 32 Mbit flash
	◆	Use of licensed AWARD BIOS
	◆	Support for DualBIOS™
	◆	PnP 1.0a, DMI 2.0, SM BIOS 2.4, ACPI 1.0b
Unique Features	◆	Support for @BIOS
	◆	Support for Q-Flash
	◆	Support for Xpress BIOS Rescue
	◆	Support for Download Center
	◆	Support for Xpress Install
	◆	Support for Xpress Recovery2
	◆	Support for EasyTune * Available functions in EasyTune may differ by motherboard model.
	◆	Support for Smart 6™
	◆	Support for Auto Green
	◆	Support for eXtreme Hard Drive (X.H.D)
	◆	Support for ON/OFF Charge
	◆	Support for Cloud OC
	◆	Support for 3TB+ Unlock
	◆	Support for TouchBIOS
	◆	Support for Q-Share
Bundled Software	◆	Norton Internet Security (OEM version)
	◆	Intel® Smart Response Technology
	◆	LucidLogix Virtu * Make sure the monitor cable has been connected to the integrated graphics port on the back panel.
Operating System	◆	Support for Microsoft® Windows 7/Vista/XP
Form Factor	◆	ATX Form Factor; 30.5cm x 21.5cm

* GIGABYTE reserves the right to make any changes to the product specifications and product-related information without prior notice.

1-3 Installing the CPU and CPU Cooler

⚠️ Read the following guidelines before you begin to install the CPU:
- Make sure that the motherboard supports the CPU.
  (Go to GIGABYTE's website for the latest CPU support list.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the CPU to prevent hardware damage.
- Locate the pin one of the CPU. The CPU cannot be inserted if oriented incorrectly. (Or you may locate the notches on both sides of the CPU and alignment keys on the CPU socket.)
- Apply an even and thin layer of thermal grease on the surface of the CPU.
- Do not turn on the computer if the CPU cooler is not installed, otherwise overheating and damage of the CPU may occur.
- Set the CPU host frequency in accordance with the CPU specifications. It is not recommended that the system bus frequency be set beyond hardware specifications since it does not meet the standard requirements for the peripherals. If you wish to set the frequency beyond the standard specifications, please do so according to your hardware specifications including the CPU, graphics card, memory, hard drive, etc.

1-3-1 Installing the CPU

A.   Locate the alignment keys on the motherboard CPU socket and the notches on the CPU.

LGA1155 CPU Socket

Alignment Key   Alignment Key

Pin One Corner of the CPU Socket

LGA1155 CPU

Notch   Notch

Triangle Pin One Marking on the CPU
B.   Follow the steps below to correctly install the CPU into the motherboard CPU socket.

⚠ **Before installing the CPU, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the CPU.**
Step 1:
Gently press the CPU socket lever handle down and away from the socket with your finger. Then completely lift the CPU socket lever and the metal load plate will be lifted as well.
Step 2:
Remove the CPU socket cover as shown. Hold your index finger down on the rear grip of the socket cover and use your thumb to lift up the front edge (next to the "REMOVE" mark) and then remove the cover. (DO NOT touch socket contacts. To protect the CPU socket, always re-place the protective socket cover when the CPU is not installed.)
Step 3:
Hold the CPU with your thumb and index fingers. Align the CPU pin one marking (triangle) with the pin one corner of the CPU socket (or you may align the CPU notches with the socket alignment keys) and gently insert the CPU into position.
Step 4:
Once the CPU is properly inserted, use one hand to hold the socket lever and use the other to lightly replace the load plate. When replacing the load plate, make sure the front end of the load plate is under the shoulder screw.

Step 5:
Push the CPU socket lever back into its locked position.
NOTE:
Hold the CPU socket lever by the handle, not the lever base portion.

1-3-2 Installing the CPU Cooler

Follow the steps below to correctly install the CPU cooler on the motherboard. (The following procedure uses Intel® boxed cooler as the example cooler.)

Direction of the Arrow Sign on the Male Push Pin

Male Push Pin

The Top of Female Push Pin

Female Push Pin
Step 1:
Apply an even and thin layer of thermal grease on the surface of the installed CPU.

Step 2:
Before installing the cooler, note the direction of the arrow sign ↺ on the male push pin. (Turning the push pin along the direction of arrow is to remove the cooler, on the contrary, is to install.)

Step 3:
Place the cooler atop the CPU, aligning the four push pins through the pin holes on the motherboard. Push down on the push pins diagonally.
Step 4:
You should hear a "click" when pushing down each push pin. Check that the Male and Female push pins are joined closely. (Refer to your CPU cooler installation manual for instructions on installing the cooler.)
Step 5:
After the installation, check the back of the motherboard. If the push pin is inserted as the picture above shows, the installation is complete.
Step 6:
Finally, attach the power connector of the CPU cooler to the CPU fan header (CPU_FAN) on the motherboard.

Use extreme care when removing the CPU cooler because the thermal grease/tape between the CPU cooler and CPU may adhere to the CPU. Inadequately removing the CPU cooler may damage the CPU.

1-4   Installing the Memory

Read the following guidelines before you begin to install the memory:
- Make sure that the motherboard supports the memory. It is recommended that memory of the same capacity, brand, speed, and chips be used.
  (Go to GIGABYTE's website for the latest supported memory speeds and memory modules.)
- Always turn off the computer and unplug the power cord from the power outlet before installing the memory to prevent hardware damage.
- Memory modules have a foolproof design. A memory module can be installed in only one direction. If you are unable to insert the memory, switch the direction.

1-4-1   Dual Channel Memory Configuration

This motherboard provides four DDR3 memory sockets and supports Dual Channel Technology. After the memory is installed, the BIOS will automatically detect the specifications and capacity of the memory. Enabling Dual Channel memory mode will double the original memory bandwidth.
The four DDR3 memory sockets are divided into two channels and each channel has two memory sockets as following:
▶▶Channel A: DDR3_2, DDR3_4
▶▶Channel B: DDR3_1, DDR3_3
▶▶ Dual Channel Memory Configurations Table

	DDR3_4	DDR3_2	DDR3_3	DDR3_1
Two Modules	- -	DS/SS	- -	DS/SS
	DS/SS	- -	DS/SS	- -
Four Modules	DS/SS	DS/SS	DS/SS	DS/SS

(SS=Single-Sided, DS=Double-Sided, "- -"=No Memory)

Due to CPU limitations, read the following guidelines before installing the memory in Dual Channel mode.
1. Dual Channel mode cannot be enabled if only one DDR3 memory module is installed.
2. When enabling Dual Channel mode with two or four memory modules, it is recommended that memory of the same capacity, brand, speed, and chips be used and installed in the same colored DDR3 sockets. For optimum performance, when enabling Dual Channel mode with two memory modules, we recommend that you install them in the DDR3_1 and DDR3_2 sockets.

1-4-2   Installing a Memory

⚠️ **Before installing a memory module, make sure to turn off the computer and unplug the power cord from the power outlet to prevent damage to the memory module.**
DDR3 and DDR2 DIMMs are not compatible to each other or DDR DIMMs. Be sure to install DDR3 DIMMs on this motherboard.

Notch

DDR3 DIMM
A DDR3 memory module has a notch, so it can only fit in one direction. Follow the steps below to correctly install your memory modules in the memory sockets.
Step 1:
Note the orientation of the memory module. Spread the retaining clips at both ends of the memory socket. Place the memory module on the socket. As indicated in the picture on the left, place your fingers on the top edge of the memory, push down on the memory and insert it vertically into the memory socket.
Step 2:
The clips at both ends of the socket will snap into place when the memory module is securely inserted.

1-5 Installing an Expansion Card

Read the following guidelines before you begin to install an expansion card:
- Make sure the motherboard supports the expansion card. Carefully read the manual that came with your expansion card.
- Always turn off the computer and unplug the power cord from the power outlet before installing an expansion card to prevent hardware damage.

PCI Express x16 Slot

PCI Express x1 Slot

PCI Slot
Follow the steps below to correctly install your expansion card in the expansion slot.
1. Locate an expansion slot that supports your card. Remove the metal slot cover from the chassis back panel.
2. Align the card with the slot, and press down on the card until it is fully seated in the slot.
3. Make sure the metal contacts on the card are completely inserted into the slot.
4. Secure the card's metal bracket to the chassis back panel with a screw.
5. After installing all expansion cards, replace the chassis cover(s).
6. Turn on your computer. If necessary, go to BIOS Setup to make any required BIOS changes for your expansion card(s).
7. Install the driver provided with the expansion card in your operating system.

Example: Installing and Removing a PCI Express Graphics Card:

- Installing a Graphics Card:
  Gently push down on the top edge of the card until it is fully inserted into the PCI Express slot. Make sure the card is securely seated in the slot and does not rock.
- Removing the Card:
  Press the latch at the end of the PCI Express slot to release the card and then pull the card straight up from the slot.

1-6   Back Panel Connectors
ⓐ **USB 2.0/1.1 Port**

The USB port supports the USB 2.0/1.1 specification. Use this port for USB devices such as a USB key-board/mouse, USB printer, USB flash drive and etc.

ⓑ **PS/2 Keyboard/Mouse Port**

Use this port to connect a PS/2 mouse or keyboard.

ⓒ **Parallel Port**

Use the parallel port to connect devices such as a printer, scanner and etc. The parallel port is also called a printer port.

ⓓ **Serial Port**

Use the serial port to connect devices such as a mouse, modem or other peripherals.

ⓔ **Optical S/PDIF Out Connector**

This connector provides digital audio out to an external audio system that supports digital optical audio. Before using this feature, ensure that your audio system provides an optical digital audio in connector.

ⓕ **HDMI Port**

HDMI (High-Definition Multimedia Interface) is an all-digital audio/video interface capable of transmitting un-compressed audio/video signals. The HDMI port is HDCP compliant and supports Dolby TrueHD and DTS HD Master Audio formats. You can use this port to connect your HDMI-supported audio/video device. The maximum supported resolution is 1920x1200, but the actual resolutions supported are de-pendent on the monitor being used.

After installing the HDMI device, make sure the default device for sound playback is the HDMI device. (The item name may differ from operating system. Refer to the figure below for details.)
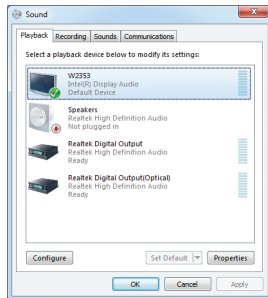

In Windows 7, select Start>Control Panel>Hardware and Sound>Sound>Playback, set **Intel(R) Display Audio** to the default playback device.

> • When removing the cable connected to a back panel connector, first remove the cable from your device and then remove it from the motherboard.
> • When removing the cable, pull it straight out from the connector. Do not rock it side to side to prevent an electrical short inside the cable connector.

USB 3.0/2.0 Port
The USB 3.0 port supports the USB 3.0 specification and is compatible to the USB 2.0/1.1 specification. Use this port for USB devices such as a USB keyboard/mouse, USB printer, USB flash drive and etc.

RJ-45 LAN Port
The Gigabit Ethernet LAN port provides Internet connection at up to 1 Gbps data rate. The following describes the states of the LAN port LEDs.

Connection/
Speed LED   Activity LED

LAN Port
Connection/Speed LED:

State	Description
Orange	1 Gbps data rate
Green	100 Mbps data rate
Off	10 Mbps data rate

Activity LED:

State	Description
Blinking	Data transmission or receiving is occurring
Off	No data transmission or receiving is occurring

Line In Jack (Blue)
The default line in jack. Use this audio jack for line in devices such as an optical drive, walkman, etc.

Line Out Jack (Green)
The default line out jack. Use this audio jack for a headphone or 2-channel speaker. This jack can be used to connect front speakers in a 4/5.1/7.1-channel audio configuration.

Mic In Jack (Pink)
The default Mic in jack. Microphones must be connected to this jack.

To configure 7.1-channel audio, you have to use an HD front panel audio module and enable the multi-channel audio feature through the audio driver. Refer to the instructions on setting up a 2/4/5.1/7.1-channel audio configuration in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."

1-7 Internal Connectors
1)	**ATX_12V**		**9)**	**mSATA**
2)	**ATX**		**10)**	**CLR_CMOS**
3)	**CPU_FAN**		**11)**	**F_PANEL**
4)	**SYS_FAN1/2**		**12)**	**F_AUDIO**
5)	**PWR_FAN**		**13)**	**SPDIF_O**
6)	**BAT**		**14)**	**F_USB1/F_USB2/F_USB3**
7)	**SATA3_0/1**		**15)**	**TPM**
8)	**SATA2_2/3/4/5**			

Read the following guidelines before connecting external devices:
• First make sure your devices are compliant with the connectors you wish to connect.
• Before installing the devices, be sure to turn off the devices and your computer. Unplug the power cord from the power outlet to prevent damage to the devices.
• After installing the device and before turning on the computer, make sure the device cable has been securely attached to the connector on the motherboard.

1/2) ATX_12V/ATX (2x2 12V Power Connector and 2x12 Main Power Connector)

With the use of the power connector, the power supply can supply enough stable power to all the components on the motherboard. Before connecting the power connector, first make sure the power supply is turned off and all devices are properly installed. The power connector possesses a foolproof design. Connect the power supply cable to the power connector in the correct orientation. The 12V power connector mainly supplies power to the CPU. If the 12V power connector is not connected, the computer will not start.

To meet expansion requirements, it is recommended that a power supply that can withstand high power consumption be used (500W or greater). If a power supply is used that does not provide the required power, the result can lead to an unstable or unbootable system.
ATX_12V:

Pin No.	Definition
1	GND
2	GND
3	+12V
4	+12V
ATX:

Pin No.	Definition	Pin No.	Definition
1	3.3V	13	3.3V
2	3.3V	14	-12V
3	GND	15	GND
4	+5V	16	PS_ON (soft On/Off)
5	GND	17	GND
6	+5V	18	GND
7	GND	19	GND
8	Power Good	20	-5V
9	5VSB (stand by +5V)	21	+5V
10	+12V	22	+5V
11	+12V (Only for 2x12-pin ATX)	23	+5V (Only for 2x12-pin ATX)
12	3.3V (Only for 2x12-pin ATX)	24	GND (Only for 2x12-pin ATX)

3/4/5) CPU_FAN/SYS_FAN1/SYS_FAN2/PWR_FAN (Fan Headers)

The motherboard has a 4-pin CPU fan header (CPU_FAN), a 4-pin (SYS_FAN2) and a 3-pin (SYS_FAN1) system fan headers, and a 3-pin power fan header (PWR_FAN). Most fan headers possess a foolproof insertion design. When connecting a fan cable, be sure to connect it in the correct orientation (the black connector wire is the ground wire). The motherboard supports CPU fan speed control, which requires the use of a CPU fan with fan speed control design. For optimum heat dissipation, it is recommended that a system fan be installed inside the chassis.

CPU_FAN

SYS_FAN2
SYS_FAN1/PWR_FAN

CPU_FAN:

Pin No.	Definition

2	+12V
3	Sense

- • Be sure to connect fan cables to the fan headers to prevent your CPU and system from overheating. Overheating may result in damage to the CPU or the system may hang.
- • These fan headers are not configuration jumper blocks. Do not place a jumper cap on the headers.

6) BAT (Battery)

The battery provides power to keep the values (such as BIOS configurations, date, and time information) in the CMOS when the computer is turned off. Replace the battery when the battery voltage drops to a low level, or the CMOS values may not be accurate or may be lost.
You may clear the CMOS values by removing the battery:
1. Turn off your computer and unplug the power cord.
2. Gently remove the battery from the battery holder and wait for one minute. (Or use a metal object like a screwdriver to touch the positive and negative terminals of the battery holder, making them short for 5 seconds.)
3. Replace the battery.
4. Plug in the power cord and restart your computer.

- • Always turn off your computer and unplug the power cord before replacing the battery.
- • Replace the battery with an equivalent one. Danger of explosion if the battery is replaced with an incorrect model.
- • Contact the place of purchase or local dealer if you are not able to replace the battery by yourself or uncertain about the battery model.
- • When installing the battery, note the orientation of the positive side (+) and the negative side (-) of the battery (the positive side should face up).
- • Used batteries must be handled in accordance with local environmental regulations.

7) SATA3_0/1 (SATA 6Gb/s Connectors, Controlled by Intel Z68 Chipset)

The SATA connectors conform to SATA 6Gb/s standard and are compatible with SATA 3Gb/s and SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The SATA3_0 and SATA3_1 connectors support RAID 0, and RAID 1. RAID 5 and RAID 10 can be implemented on the two connectors with the SATA2_2/3/4/5 connector [(Note)]. Refer to Chapter 5, "Configuring SATA Hard Drive(s)," for instructions on configuring a RAID array.
Pin No.	Definition
1	GND
2	TXP
3	TXN
4	GND
5	RXN
6	RXP
7	GND

SATA3_1
SATA3_0

8) SATA2_2/3/4/5 (SATA 3Gb/s Connectors, Controlled by Intel Z68 Chipset)

The SATA connectors conform to SATA 3Gb/s standard and are compatible with SATA 1.5Gb/s standard. Each SATA connector supports a single SATA device. The Intel Z68 chipset supports RAID 0, RAID 1, RAID5, and RAID 10. Refer to Chapter 5, "Configuring SATA Hard Drive(s)," for instructions on configuring a RAID array.

Pin No.	Definition
1	GND
2	TXP
3	TXN
4	GND
5	RXN
6	RXP
7	GND

SATA2_5   SATA2_3
SATA2_4   SATA2_2
Please connect the L-shaped end of the SATA cable to your SATA hard drive.

- A RAID 0 or RAID 1 configuration requires at least two hard drives. If more than two hard drives are to be used, the total number of hard drives must be an even number.
- A RAID 5 configuration requires at least three hard drives. (The total number of hard drives does not have to be an even number.)
- A RAID 10 configuration requires four hard drives.

(Note)   When a RAID set is built across the SATA 6Gb/s and SATA 3Gb/s channels, the system performance of the RAID set may vary depending on the devices being connected.

9) mSATA (Solid-State Drive Connector, Controlled by the Intel Z68 Chipset)

The mSATA connector conforms to SATA 3Gb/s standard and can connect to a single solid-state drive. When the mSATA connector is installed with a solid-state drive, the SATA2_5 connector will become unavailable.

mSATA
10) CLR_CMOS (Clearing CMOS Jumper)

Use this jumper to clear the CMOS values (e.g. date information and BIOS configurations) and reset the CMOS values to factory defaults. To clear the CMOS values, place a jumper cap on the two pins to temporarily short the two pins or use a metal object like a screwdriver to touch the two pins for a few seconds.
Open: Normal

Short: Clear CMOS Values

⚠️ • Always turn off your computer and unplug the power cord from the power outlet before clearing the CMOS values.
• After clearing the CMOS values and before turning on your computer, be sure to remove the jumper cap from the jumper. Failure to do so may cause damage to the motherboard.
• After system restart, go to BIOS Setup to load factory defaults (select Load Optimized Defaults) or manually configure the BIOS settings (refer to Chapter 2, "BIOS Setup," for BIOS configurations).

11) F_PANEL (Front Panel Header)

Connect the power switch, reset switch, speaker, chassis intrusion switch/sensor and system status indicator on the chassis to this header according to the pin assignments below. Note the positive and negative pins before connecting the cables.
- **MSG/PWR** (Message/Power/Sleep LED, Yellow/Purple):

System Status	LED
S0	On
S1	Blinking
S3/S4/S5	Off

Connects to the power status indicator on the chassis front panel. The LED is on when the system is operating. The LED keeps blinking when the system is in S1 sleep state. The LED is off when the system is in S3/S4 sleep state or powered off (S5).

- **PW** (Power Switch, Red):

    Connects to the power switch on the chassis front panel. You may configure the way to turn off your system using the power switch (refer to Chapter 2, "BIOS Setup," "Power Management Setup," for more information).

- **SPEAK** (Speaker, Orange):

    Connects to the speaker on the chassis front panel. The system reports system startup status by issuing a beep code. One single short beep will be heard if no problem is detected at system startup. If a problem is detected, the BIOS may issue beeps in different patterns to indicate the problem. Refer to Chapter 5, "Troubleshooting," for information about beep codes.

- **HD** (Hard Drive Activity LED, Blue)

    Connects to the hard drive activity LED on the chassis front panel. The LED is on when the hard drive is reading or writing data.

- **RES** (Reset Switch, Green):

    Connects to the reset switch on the chassis front panel. Press the reset switch to restart the computer if the computer freezes and fails to perform a normal restart.

- **CI** (Chassis Intrusion Header, Gray):

    Connects to the chassis intrusion switch/sensor on the chassis that can detect if the chassis cover has been removed. This function requires a chassis with a chassis intrusion switch/sensor.

The front panel design may differ by chassis. A front panel module mainly consists of power switch, reset switch, power LED, hard drive activity LED, speaker and etc. When connecting your chassis front panel module to this header, make sure the wire assignments and the pin assignments are matched correctly.

12) F_AUDIO (Front Panel Audio Header)

The front panel audio header supports Intel High Definition audio (HD) and AC'97 audio. You may connect your chassis front panel audio module to this header. Make sure the wire assignments of the module connector match the pin assignments of the motherboard header. Incorrect connection between the module connector and the motherboard header will make the device unable to work or even damage it.
For HD Front Panel Audio:

Pin No.	Definition
1	MIC2_L
2	GND
3	MIC2_R
4	-ACZ_DET
5	LINE2_R
6	GND
7	FAUDIO_JD
8	No Pin
9	LINE2_L
10	GND

For AC'97 Front Panel Audio:

Pin No.	Definition
1	MIC
2	GND
3	MIC Power
4	NC
5	Line Out (R)
6	NC
7	NC
8	No Pin
9	Line Out (L)
10	NC

- The front panel audio header supports HD audio by default. If your chassis provides an AC'97 front panel audio module, refer to the instructions on how to activate AC'97 functionality via the audio software in Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."
- Audio signals will be present on both of the front and back panel audio connections simultaneously. If you want to mute the back panel audio (only supported when using an HD front panel audio module), refer to Chapter 5, "Configuring 2/4/5.1/7.1-Channel Audio."
- Some chassis provide a front panel audio module that has separated connectors on each wire instead of a single plug. For information about connecting the front panel audio module that has different wire assignments, please contact the chassis manufacturer.

13) SPDIF_O (S/PDIF Out Header)

This header supports digital S/PDIF Out and connects a S/PDIF digital audio cable (provided by expansion cards) for digital audio output from your motherboard to certain expansion cards like graphics cards and sound cards. For example, some graphics cards may require you to use a S/PDIF digital audio cable for digital audio output from your motherboard to your graphics card if you wish to connect an HDMI display to the graphics card and have digital audio output from the HDMI display at the same time. For information about connecting the S/PDIF digital audio cable, carefully read the manual for your expansion card.
Pin No.	Definition
1	SPDIFO
2	GND

14) F_USB1/F_USB2/F_USB3 (USB 2.0/1.1 Headers)

The headers conform to USB 2.0/1.1 specification. Each USB header can provide two USB ports via an optional USB bracket. For purchasing the optional USB bracket, please contact the local dealer.
Pin No.	Definition
1	Power (5V)
2	Power (5V)
3	USB DX-
4	USB DY-
5	USB DX+
6	USB DY+
7	GND
8	GND
9	No Pin
10	NC

When the system is in S4/S5 mode, only the USB ports routed to the F_USB1 header can support the ON/OFF Charge function.

• Do not plug the IEEE 1394 bracket (2x5-pin) cable into the USB header.
• Prior to installing the USB bracket, be sure to turn off your computer and unplug the power cord from the power outlet to prevent damage to the USB bracket.

15) TPM (Trusted Platform Module Header)

You may connect a TPM (Trusted Platform Module) to this header.
Pin No.	Definition	Pin No.	Definition
1	LCLK	11	LAD0
2	GND	12	GND
3	LFRAME	13	NC
4	No Pin	14	ID
5	LRESET	15	SB3V
6	NC	16	SERIRQ
7	LAD3	17	GND
8	LAD2	18	NC
9	VCC3	19	NC
10	LAD1	20	SUSCLK

Chapter 2   BIOS Setup

BIOS (Basic Input and Output System) records hardware parameters of the system in the CMOS on the motherboard. Its major functions include conducting the Power-On Self-Test (POST) during system startup, saving system parameters and loading operating system, etc. BIOS includes a BIOS Setup program that allows the user to modify basic system configuration settings or to activate certain system features. When the power is turned off, the battery on the motherboard supplies the necessary power to the CMOS to keep the configuration values in the CMOS.

To access the BIOS Setup program, press the <Delete> key during the POST when the power is turned on. To see more advanced BIOS Setup menu options, you can press <Ctrl> + <F1> in the main menu of the BIOS Setup program.

To upgrade the BIOS, use either the GIGABYTE Q-Flash or @BIOS utility.
• Q-Flash allows the user to quickly and easily upgrade or back up BIOS without entering the operating system.
• @BIOS is a Windows-based utility that searches and downloads the latest version of BIOS from the Internet and updates the BIOS.
For instructions on using the Q-Flash and @BIOS utilities, refer to Chapter 4, "BIOS Update Utilities."

> • Because BIOS flashing is potentially risky, if you do not encounter problems using the current ver-sion of BIOS, it is recommended that you not flash the BIOS. To flash the BIOS, do it with caution. Inadequate BIOS flashing may result in system malfunction.
> • BIOS will emit a beep code during the POST. Refer to Chapter 5, "Troubleshooting," for the beep codes description.
> • It is recommended that you not alter the default settings (unless you need to) to prevent system instability or other unexpected results. Inadequately altering the settings may result in system's failure to boot. If this occurs, try to clear the CMOS values and reset the board to default values. (Refer to the "Load Optimized Defaults" section in this chapter or introductions of the battery/clearing CMOS jumper in Chapter 1 for how to clear the CMOS values.)

2-1 Startup Screen

The following screens may appear when the computer boots.

A. The LOGO Screen (Default)

TAB POST SCREEN DEL BIOS SETUP \ Q-FLASH F9 XPRESS RECOVERY2 F12 BOOT MENU END Q-FLASH — Function Keys

B. The POST Screen

Award Modular BIOS v6.00PG

Motherboard Model —
BIOS Version —

<DEL>: BIOS Setup <F9>: XpressRecovery2 <F12>: Boot Menu <End>: Qflash — Function Keys
05/12/2011-Z68-7A89WG0DC-00
Function Keys:

<TAB>: POST SCREEN

Press the <Tab> key to show the BIOS POST screen. To show the BIOS POST screen at system startup, refer to the instructions on the **Full Screen LOGO Show** item on page 44.

<DEL>: BIOS SETUP\Q-FLASH

Press the <Delete> key to enter BIOS Setup or to access the Q-Flash utility in BIOS Setup.

<F9>: XPRESS RECOVERY2

If you have ever entered Xpress Recovery2 to back up hard drive data using the driver disk, the <F9> key can be used for subsequent access to Xpress Recovery2 during the POST. For more information, refer to Chapter 4, "Xpress Recovery2."

<F12>: BOOT MENU

Boot Menu allows you to set the first boot device without entering BIOS Setup. In Boot Menu, use the up arrow key <↑> or the down arrow key <↓> to select the first boot device, then press <Enter> to accept. To exit Boot Menu, press <Esc>. The system will directly boot from the device configured in Boot Menu.
Note: The setting in Boot Menu is effective for one time only. After system restart, the device boot order will still be based on BIOS Setup settings. You can access Boot Menu again to change the first boot device setting as needed.

<END>: Q-FLASH

Press the <End> key to access the Q-Flash utility directly without having to enter BIOS Setup first.

2-2   The Main Menu

Once you enter the BIOS Setup program, the Main Menu (as shown below) appears on the screen. Use arrow keys to move among the items and press <Enter> to accept or enter a sub-menu.

(Sample BIOS Version: E2)

```

                              Change CPU's Clock & Voltage
```

BIOS Setup Program Function Keys

<↑><↓><←><→>	Move the selection bar to select an item
<Enter>	Execute command or enter the submenu
<Esc>	Main Menu: Exit the BIOS Setup program
	Submenus: Exit current submenu
<Page Up>	Increase the numeric value or make changes
<Page Down>	Decrease the numeric value or make changes
<F1>	Show descriptions of the function keys
<F2>	Move cursor to the Item Help block on the right (submenus only)
<F5>	Restore the previous BIOS settings for the current submenus
<F6>	Load the Fail-Safe BIOS default settings for the current submenus
<F7>	Load the Optimized BIOS default settings for the current submenus
<F8>	Access the Q-Flash utility
<F9>	Display system information
<F10>	Save all the changes and exit the BIOS Setup program
<F11>	Save CMOS to BIOS
<F12>	Load CMOS from BIOS

Main Menu Help

The on-screen description of a highlighted setup option is displayed on the bottom line of the Main Menu.

Submenu Help

While in a submenu, press <F1> to display a help screen (General Help) of function keys available for the menu. Press <Esc> to exit the help screen. Help for each item is in the Item Help block on the right side of the submenu.

- • If you do not find the settings you want in the Main Menu or a submenu, press <Ctrl>+<F1> to access more advanced options.
- • When the system is not stable as usual, select the **Load Optimized Defaults** item to set your system to its defaults.
- • The BIOS Setup menus described in this chapter are for reference only and may differ by BIOS version.

■ **The Functions of the <F11> and <F12> keys (For the Main Menu Only)**
  ▶ **F11: Save CMOS to BIOS**
  This function allows you to save the current BIOS settings to a profile. You can create up to 8 profiles (Profile 1-8) and name each profile. First enter the profile name (to erase the default profile name, use the SPACE key) and then press <Enter> to complete.
  ▶ **F12: Load CMOS from BIOS**
  If your system becomes unstable and you have loaded the BIOS default settings, you can use this function to load the BIOS settings from a profile created before, without the hassles of reconfiguring the BIOS settings. First select the profile you wish to load, then press <Enter> to complete.

■ **MB Intelligent Tweaker(M.I.T.)**
  Use this menu to configure the clock, frequency and voltages of your CPU, memory, etc.

■ **Standard CMOS Features**
  Use this menu to configure the system time and date, hard drive types, floppy disk drive types, and the type of errors that stop the system boot, etc.

■ **Advanced BIOS Features**
  Use this menu to configure the device boot order, advanced features available on the CPU, and the primary display adapter.

■ **Integrated Peripherals**
  Use this menu to configure all peripheral devices, such as IDE, SATA, USB, integrated audio, and integrated LAN, etc.

■ **Power Management Setup**
  Use this menu to configure all the power-saving functions.

■ **PC Health Status**
  Use this menu to see information about autodetected system/CPU temperature, system voltage and fan speed, etc.

■ **Load Fail-Safe Defaults**
  Fail-Safe defaults are factory settings for the most stable, minimal-performance system operations.

■ **Load Optimized Defaults**
  Optimized defaults are factory settings for optimal-performance system operations.

■ **Set Supervisor Password**
  Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup.
  A supervisor password allows you to make changes in BIOS Setup.

■ **Set User Password**
  Change, set, or disable password. It allows you to restrict access to the system and BIOS Setup.
  A user password only allows you to view the BIOS settings but not to make changes.

■ **Save & Exit Setup**
  Save all the changes made in the BIOS Setup program to the CMOS and exit BIOS Setup. (Pressing <F10> can also carry out this task.)

■ **Exit Without Saving**
  Abandon all changes and the previous settings remain in effect. Pressing <Y> to the confirmation message will exit BIOS Setup. (Pressing <Esc> can also carry out this task.)

```

Whether the system will work stably with the overclock/overvoltage settings you made is dependent on your overall system configurations. Incorrectly doing overclock/overvoltage may result in damage to CPU, chipset, or memory and reduce the useful life of these components. This page is for advanced users only and we recommend you not to alter the default settings to prevent system instability or other unexpected results. (Inadequately altering the settings may result in system's failure to boot. If this occurs, clear the CMOS values and reset the board to default values.)

```

☞ **CPU Clock Ratio**

Allows you to alter the clock ratio for the installed CPU. The adjustable range is dependent on the CPU being installed.

☞ **CPU Frequency**

Displays the current operating CPU frequency.

(Note 1) This item is present only when you install a memory module that supports this feature.
(Note 2) This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

- **Internal CPU PLL Overvoltage**
  Enabled allows CPU PLL voltage to operate at a higher value. **Disabled** allows CPU PLL voltage to operate at default value. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

- **Real-Time Ratio Changes In OS** (Note)
  Enabled allows you to make real-time changes to the CPU clock ratio in your operating system. The Intel Turbo Boost technology and associated items below will become unavailable. Set this item to **Disabled** if you want to manually configure CPU Turbo ratios in BIOS setup. (Default: Disabled)

- **Intel(R) Turbo Boost Tech.** (Note)
  Allows you to determine whether to enable the Intel CPU Turbo Boost technology. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

- **Turbo Ratio (1-Core)/(2-Core)/(3-Core)/(4-Core)** (Note)
  Allows you to set the CPU Turbo ratios for different number of active cores. **Auto** sets the CPU Turbo ratios according to the CPU specifications. (Default: Auto)

- **Turbo Power Limit (Watts)**
  Allows you to set a power limit for CPU Turbo mode. When the CPU power consumption exceeds the specified power limit, the CPU will automatically reduce the core frequency in order to reduce the power. **Auto** sets the power limit according to the CPU specifications. (Default: Auto)

- **Core Current Limit (Amps)**
  Allows you to set a current limit for CPU Turbo mode. When the CPU current exceeds the specified current limit, the CPU will automatically reduce the core frequency in order to reduce the current. **Auto** sets the current limit according to the CPU specifications. (Default: Auto)

- **CPU Cores Enabled** (Note)
  Allows you to determine whether to enable all CPU cores.
  - ▸ All   Enables all CPU cores. (Default)
  - ▸ 1   Enables only one CPU core.
  - ▸ 2   Enables only two CPU cores.
  - ▸ 3   Enables only three CPU cores.

- **CPU Multi-Threading** (Note)
  Allows you to determine whether to enable multi-threading technology when using an Intel CPU that supports this function. This feature only works for operating systems that support multi-processor mode. (Default: Enabled)

- **CPU Enhanced Halt (C1E)** (Note)
  Enables or disables Intel CPU Enhanced Halt (C1E) function, a CPU power-saving function in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

- **C3/C6 State Support** (Note)
  Allows you to determine whether to let the CPU enter C3/C6 mode in system halt state. When enabled, the CPU core frequency and voltage will be reduced during system halt state to decrease power consumption. The C3/C6 state is a more enhanced power-saving state than C1. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

(Note)   This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

- **CPU Thermal Monitor** (Note 1)

    Enables or disables Intel CPU Thermal Monitor function, a CPU overheating protection function. When enabled, the CPU core frequency and voltage will be reduced when the CPU is overheated. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

- **CPU EIST Function** (Note 1)

    Enables or disables Enhanced Intel SpeedStep Technology (EIST). Depending on CPU loading, Intel EIST technology can dynamically and effectively lower the CPU voltage and core frequency to decrease average power consumption and heat production. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

- **Bi-Directional PROCHOT** (Note 1)
    - Auto   Lets the BIOS automatically configure this setting. (Default)
    - Enabled   When the CPU or chipset detects that an overheating is occurring, PROCHOT signals will be emitted to lower CPU performance to decrease heat production.
    - Disabled   Only allows the CPU to detect whether an overheating is occurring to emit PROCHOT signals.

>>>>>   Standard Clock Control

- **BCLK/DMI/PEG Clock Control**

    Enables or disables the control of CPU base clock and DMI/PCIe bus frequency. **Enabled** will allow the **BCLK/DMI/PEG Frequency(0.1MHz)** item below to be configurable. Note: If your system fails to boot after overclocking, please wait for 20 seconds to allow for automated system reboot, or clear the CMOS values to reset the board to default values. (Default: Disabled)

- **BCLK/DMI/PEG Frequency(0.1MHz)**

    Allows you to manually set the CPU base clock and DMI/PCIe bus frequency. The adjustable range is from 800 MHz to 2000 MHz. This item is configurable only when the **BCLK/DMI/PEG Clock Control** option is enabled.
    Important: It is highly recommended that the CPU frequency be set in accordance with the CPU specifications.

- **Extreme Memory Profile (X.M.P.)** (Note 2)

    Allows the BIOS to read the SPD data on XMP memory module(s) to enhance memory performance when enabled.
    - Disabled   Disables this function. (Default)
    - Profile1   Uses Profile 1 settings.
    - Profile2 (Note 2)   Uses Profile 2 settings.

- **System Memory Multiplier (SPD)**

    Allows you to set the system memory multiplier. **Auto** sets memory multiplier according to memory SPD data. (Default: Auto)

- **Memory Frequency(Mhz)**

    The first memory frequency value is the normal operating frequency of the memory being used; the second is the memory frequency that is automatically adjusted according to the **BCLK/DMI/PEG Frequency (0.1MHz)**and **System Memory Multiplier** settings.

(Note 1)   This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.
(Note 2)   This item is present only when you install a memory module that supports this feature.

☞ **Internal Graphics Clock**
Allows you to set the onboard graphics clock. The adjustable range is from 400 MHz to 3000 MHz. (Default: Auto)

▶ **Advanced Memory Settings**

```

   ↑↓→←: Move       Enter: Select      +/-/PU/PD: Value       F10: Save       ESC: Exit      F1: General Help
         F5: Previous Values            F6: Fail-Safe Defaults               F7: Optimized Defaults
```

☞ **Extreme Memory Profile (X.M.P.) (Note), System Memory Multiplier (SPD),**
Memory Frequency(Mhz)
The settings under the three items above are synchronous to those under the same items on the **Advanced Frequency Settings** menu.

☞ **Performance Enhance**
Allows the system to operate at three different performance levels.
▶▶ Standard   Lets the system operate at its basic performance level.
▶▶ Turbo   Lets the system operate at its good performance level. (Default)
▶▶ Extreme   Lets the system operate at its best performance level.

☞ **DRAM Timing Selectable (SPD)**
Quick and **Expert** allows the **Channel Interleaving**, **Rank Interleaving**, **Channel A Timing Settings**, and **Channel B Timing Settings** items to be configurable. Options are: Auto (default), Quick, Expert.

☞ **Profile DDR Voltage**
When using a non-XMP memory module or **Extreme Memory Profile (X.M.P.)** is set to **Disabled**, this item will display as **1.5V**. When **Extreme Memory Profile (X.M.P.)** is set to **Profile1** or **Profile2**, this item will display the value based on the SPD data on the XMP memory.

☞ **Profile VTT Voltage**
The value displayed here is dependent on the CPU being used.

☞ **Channel Interleaving**
Enables or disables memory channel interleaving. **Enabled** allows the system to simultaneously access different channels of the memory to increase memory performance and stability. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

(Note)   This item is present only when you install a memory module that supports this feature.

☞ **Rank Interleaving**

Enables or disables memory rank interleaving. **Enabled** allows the system to simultaneously access differ-ent ranks of the memory to increase memory performance and stability. **Auto** lets the BIOS automatically configure this setting. (Default: Auto)

```
☞ **Isochronous Support**
Determines whether to enable specific streams within the CPU and Chipset. (Default: Enabled)

☞ **Virtualization Technology (Note)**
Enables or disables Intel Virtualization Technology. Virtualization enhanced by Intel Virtualization Technology will allow a platform to run multiple operating systems and applications in independent partitions. With virtualization, one computer system can function as multiple virtual systems. (Default: Enabled)
(Note)   This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

2-4 Standard CMOS Features

```

☍ **Date (mm:dd:yy)**

Sets the system date. The date format is week (read-only), month, date and year. Select the desired field and use the up arrow or down arrow key to set the date.

☍ **Time (hh:mm:ss)**

Sets the system time. For example, 1 p.m. is 13:0:0. Select the desired field and use the up arrow or down arrow key to set the time.

☍ **IDE Channel 0, 1 Master/Slave**

▸▸ IDE Channel 0, 1 Master/Slave

Configure your SATA devices by using one of the three methods below:

- Auto   Lets the BIOS automatically detect SATA devices during the POST. (Default)
- None   If no SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.
- Manual   Allows you to manually enter the specifications of the hard drive when the hard drive access mode is set to **CHS**.

▸▸ Access Mode   Sets the hard drive access mode. Options are: Auto (default), CHS, LBA, Large.

☍ **IDE Channel 2, 3 Master**

▸▸ Extended IDE Drive

Configure your SATA devices by using one of the two methods below:

- Auto   Lets the BIOS automatically detect SATA devices during the POST. (Default)
- None   If no SATA devices are used, set this item to **None** so the system will skip the detection of the device during the POST for faster system startup.

▸▸ Access Mode   Sets the hard drive access mode. Options are: Auto (default), Large.

The following fields display your hard drive specifications. If you wish to enter the parameters manually, refer to the information on the hard drive.

▸▸ Capacity   Approximate capacity of the currently installed hard drive.

▸▸ Cylinder   Number of cylinders.

▸▸ Head   Number of heads.

▶ Precomp   Write precompensation cylinder.
▶ Landing Zone Landing zone.
▶ Sector   Number of sectors.

☏ **Halt On**
 Allows you to determine whether the system will stop for an error during the POST.
 ▶ All Errors   Whenever the BIOS detects a non-fatal error the system boot will stop.
 ▶ No Errors   The system boot will not stop for any error.
 ▶ All, But Keyboard The system boot will not stop for a keyboard error but stop for all other errors.
         (Default)

☏ **Memory**
 These fields are read-only and are determined by the BIOS POST.
 ▶ Base Memory Also called conventional memory. Typically, 640 KB will be reserved for the
         MS-DOS operating system.
 ▶ Extended Memory The amount of extended memory.
 ▶ Total Memory The total amount of memory installed on the system.

2-5 Advanced BIOS Features

      Onboard VGA                           [Auto]
      On-Chip Frame Buffer Size             [64MB+2MB for GTT]

  ↑↓→←: Move      Enter: Select      +/-/PU/PD: Value      F10: Save      ESC: Exit      F1: General Help
        F5: Previous Values          F6: Fail-Safe Defaults              F7: Optimized Defaults
```

• **Hard Disk Boot Priority**

Specifies the sequence of loading the operating system from the installed hard drives. Use the up or down arrow key to select a hard drive, then press the plus key <+> (or <PageUp>) or the minus key <-> (or <PageDown>) to move it up or down on the list. Press <Esc> to exit this menu when finished.

• **Quick Boot**

Enables or disables the quick boot function to speed up the system boot-up process to shorten the waiting time for entering the operating system and to deliver greater efficiency for daily use. The settings here synchronize with the settings of the SMART QuickBoot of Smart 6™. (Default: Disabled)

• **EFI CD/DVD Boot Option**

Set this item to **EFI** if you want to install the operating system to a hard drive larger than 2.2 TB. Make sure the operating system to be installed supports booting from a GPT partition, such as Windows 7 64-bit and Windows Server 2003 64-bit. **Auto** lets the BIOS automatically configure this setting depending on the hard drive you install. (Default: Auto)

• **First/Second/Third Boot Device**

Specifies the boot order from the available devices. Use the up or down arrow key to select a device and press <Enter> to accept. Options are: Hard Disk, CDROM, USB-FDD, USB-ZIP, USB-CDROM, USB-HDD, Legacy LAN, Disabled.

• **Password Check**

Specifies whether a password is required every time the system boots, or only when you enter BIOS Setup. After configuring this item, set the password(s) under the **Set Supervisor/User Password** item in the BIOS Main Menu.

» Setup   A password is only required for entering the BIOS Setup program. (Default)
» System   A password is required for booting the system and for entering the BIOS Setup program.

(Note)   This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

- **HDD S.M.A.R.T. Capability**

  Enables or disables the S.M.A.R.T. (Self Monitoring and Reporting Technology) capability of your hard drive. This feature allows your system to report read/write errors of the hard drive and to issue warnings when a third party hardware monitor utility is installed. (Default: Disabled)

- **Limit CPUID Max. to 3** (Note)

  Allows you to determine whether to limit CPUID maximum value. Set this item to **Disabled** for Windows XP operating system; set this item to **Enabled** for legacy operating system such as Windows NT4.0. (Default: Disabled)

- **No-Execute Memory Protect** (Note)

  Enables or disables Intel Execute Disable Bit function. This function may enhance protection for the computer, reducing exposure to viruses and malicious buffer overflow attacks when working with its supporting software and system. (Default: Enabled)

- **Delay For HDD (Secs)**

  Allows you to set a delay time for the BIOS to initialize the hard drive as the system boots up. The adjustable range is from 0 to 15 seconds. (Default: 0)

- **Full Screen LOGO Show**

  Allows you to determine whether to display the GIGABYTE Logo at system startup. **Disabled** displays normal POST message. (Default: Enabled)

- **Init Display First**

  Specifies the first initiation of the monitor display from the installed PCI graphics card, PCI Express graphics card, or the onboard graphics.
  - ▸ PCI   Sets the PCI graphics card as the first display. (Default)
  - ▸ Onboard   Sets the onboard graphics as the first display.
  - ▸ PCIE x16   Sets the PCI Express graphics card on the PCIEX16 slot as the first display.
  - ▸ PCIE x8   Sets the PCI Express graphics card on the PCIEX8 slot as the first display.

- **Onboard VGA**

  Enables or disables the onboard graphics function.
  - ▸ Auto

  Allows you to set up a dual-display configuration in Windows 7 operating system. (Default)
  - ▸ Enable If No Ext PEG

  Activates the onboard graphics only when no PCI Express graphics card is installed.
  - ▸ Always Enable

  Always activates the onboard graphics, whether or not a PCI Express graphics card is installed. If you wish to set up a dual-display configuration, set this item to **Always Enable**.

- **On-Chip Frame Buffer Size**

  Frame buffer size is the total amount of system memory allocated solely for the onboard graphics controller. MS-DOS, for example, will use only this memory for display. Options are: 32MB+2MB for GTT ~ 480MB+2MB for GTT. (Default: 64MB+2MB for GTT)

(Note)   This item is present only when you install a CPU that supports this feature. For more information about Intel CPUs' unique features, please visit Intel's website.

" **eXtreme Hard Drive (XHD) (Intel Z68 Chipset)**

Enables or disables the X.H.D function for the SATA controllers integrated in the Intel Z68 Chipset. When set to **Enabled**, the **PCH SATA Control Mode** item below will be set to **RAID(XHD)** automatically. For details on using the GIGABYTE X.H.D utility, refer to Chaper 4, "eXtreme Hard Drive (X.H.D)." (Default: Disabled)

" **PCH SATA Control Mode (Intel Z68 Chipset)**

Enables or disables RAID for the SATA controllers integrated in the Intel Z68 Chipset or configures the SATA controllers to AHCI mode.

▸ IDE   Disables RAID for the SATA controllers and configures the SATA controllers to IDE mode. (Default)
▸ RAID(XHD)   Enables RAID for the SATA controllers.
▸ AHCI   Configures the SATA controllers to AHCI mode. Advanced Host Controller Interface (AHCI) is an interface specification that allows the storage driver to enable advanced Serial ATA features such as Native Command Queuing and hot plug.

" **OROM UI and Banner**

Determines whether to display Intel RAID ROM messages during the POST when the Intel SATA RAID function is enabled. (Default: Enabled)

" **SATA Port0-3 Native Mode (Intel Z68 Chipset)**

Specifies the operating mode of the integrated SATA controllers.

▸ Disabled   Allows the SATA controllers to operate in Legacy IDE mode.
                         In Legacy mode the SATA controllers use dedicated IRQs that cannot be shared with other device. Set this option to **Disabled** if you wish to install operating systems that do not support Native mode.
▸ Enabled   Allows the SATA controllers to operate in Native IDE mode.
                         Enable Native IDE mode if you wish to install operating systems that support Native mode. (Default)

☞ **USB Controllers**
Enables or disables the integrated USB controller. (Default: Enabled)
Disabled will turn off all of the USB functionalities below.

☞ **USB Legacy Function**
Allows USB keyboard to be used in MS-DOS. (Default: Disabled)

☞ **USB Storage Function**
Determines whether to detect USB storage devices, including USB flash drives and USB hard drives during the POST. (Default: Enabled)

☞ **Azalia Codec**
Enables or disables the onboard audio function. (Default: Auto)
If you wish to install a 3rd party add-in audio card instead of using the onboard audio, set this item to **Disabled**.

☞ **Onboard H/W LAN**
Enables or disables the onboard LAN function. (Default: Enabled)
If you wish to install a 3rd party add-in network card instead of using the onboard LAN, set this item to **Disabled**.

☞ **SMART LAN (LAN Cable Diagnostic Function)**

```
                          CMOS Setup Utility-Copyright (C) 1984-2011 Award Software
                                              SMART LAN

   Start detecting at Port.....                                          Item Help
   Part1-2  Status  =  Open   /  Length  =     0m               Menu Level    ▶▶
   Part3-6  Status  =  Open   /  Length  =     0m
   Part4-5  Status  =  Open   /  Length  =     0m
   Part7-8  Status  =  Open   /  Length  =     0m

   ↑↓→←: Move        Enter: Select         +/-/PU/PD: Value        F10: Save        ESC: Exit        F1: General Help
          F5: Previous Values              F6: Fail-Safe Defaults                   F7: Optimized Defaults
```
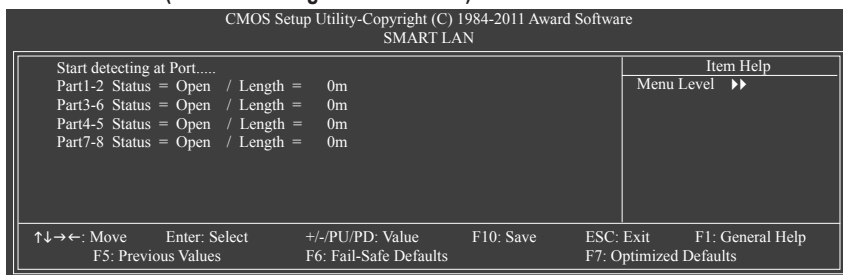

This motherboard incorporates cable diagnostic feature designed to detect the status of the attached LAN cable. This feature will detect cabling issue and report the approximate distance to the fault or short. Refer to the following information for diagnosing your LAN cable:

☞ **When No LAN Cable Is Attached...**
If no LAN cable is attached to the motherboard, the **Status** fields of all four pairs of wires will show **Open** and the **Length** fields show **0m**, as shown in the figure above.

☞ **When LAN Cable Is Functioning Normally...**
If no cable problem is detected on the LAN cable connected to a Gigabit hub or a 10/100 Mbps hub, the following message will appear:

```
   Start detecting at Port.....
   Link Detected --> 100Mbps
   Cable Length=    30m
```
▶▶ Link Detected   Displays transmission speed.
▶▶ Cable Length   Displays the approximate length of the attached LAN cable.
Note: The Gigabit hub will only operate at a speed of 10/100 Mbps in MS-DOS mode; it will operate at a normal speed of 10/100/1000 Mbps in Windows mode or when the LAN Boot ROM is activated.

  ☞ **When a Cable Problem Occurs...**
      If a cable problem occurs on a specified pair of wires, the **Status** field will show **Short** and then length
      shown will be the approximate distance to the fault or short.
      Example: `Part1-2 Status = Short / Length  =  2m`
      Explanation: A fault or short might occur at about 2m on Part 1-2.
      Note: Part 4-5 and Part 7-8 are not used in a 10/100 Mbps environment, so their **Status** fields will show
      Open, and the length shown is the approximate length of the attached LAN cable.

  ☞ **Onboard LAN Boot ROM**
      Allows you to decide whether to activate the boot ROM integrated with the onboard LAN chip.
      (Default: Disabled)

  ☞ **Onboard USB 3.0 Controller (Etron EJ168 USB Controller)**
      Enables or disables the Etron EJ168 USB controller. (Default: Enabled)

  ☞ **Onboard Serial Port 1**
      Enables or disables the serial port and specifies its base I/O address and corresponding interrupt. Options
      are: Auto, 3F8/IRQ4 (default), 2F8/IRQ3, 3E8/IRQ4, 2E8/IRQ3, Disabled.

  ☞ **Onboard Parallel Port**
      Enables or disables the onboard parallel port (LPT) and specifies its base I/O address and corresponding
      interrupt. Options are: 378/IRQ7 (default), 278/IRQ5, 3BC/IRQ7, Disabled.

  ☞ **Parallel Port Mode**
      Selects an operating mode for the onboard parallel (LPT) port. Options are: SPP (Standard Parallel Port)
      (default), EPP (Enhanced Parallel Port), ECP (Extended Capabilities Port), ECP+EPP.

2-7 Power Management Setup

```

☞ **ACPI Suspend Type**

Specifies the ACPI sleep state when the system enters suspend.

▶ S1(POS)   Enables the system to enter the ACPI S1 (Power on Suspend) sleep state.
In S1 sleep state, the system appears suspended and stays in a low power mode. The system can be resumed at any time.

▶ S3(STR)   Enables the system to enter the ACPI S3 (Suspend to RAM) sleep state (default).
In S3 sleep state, the system appears to be off and consumes less power than in the S1 state. When signaled by a wake-up device or event, the system resumes to its working state exactly where it was left off.

☞ **Soft-Off by PWR-BTTN**

Configures the way to turn off the computer in MS-DOS mode using the power button.

▶ Instant-Off   Press the power button and then the system will be turned off instantly. (Default)

▶ Delay 4 Sec.   Press and hold the power button for 4 seconds to turn off the system. If the power button is pressed for less than 4 seconds, the system will enter suspend mode.

☞ **PME Event Wake Up**

Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a PCI or PCIe device. Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead. (Default: Enabled)

☞ **Power On by Ring**

Allows the system to be awakened from an ACPI sleep state by a wake-up signal from a modem that supports wake-up function. (Default: Enabled)

(Note)   Supported on Windows 7/Vista operating system only.

- **Resume by Alarm**
  Determines whether to power on the system at a desired time. (Default: Disabled)
  If enabled, set the date and time as following:
  ▶ Date (of Month) Alarm: Turn on the system at a specific time on each day or on a specific day in a month.
  ▶ Time (hh: mm: ss) Alarm: Set the time at which the system will be powered on automatically.
  Note: When using this function, avoid inadequate shutdown from the operating system or removal of the AC power, or the settings may not be effective.

- **HPET Support** (Note)
  Enables or disables High Precision Event Timer (HPET) for Windows 7/Vista operating system.
  (Default: Enabled)

- **HPET Mode** (Note)
  Allows you to select the HPET mode for your Windows 7/Vista operating system. Select **32-bit mode** when you install 32-bit Windows Vista; select **64-bit mode** when you install 64-bit Windows 7/Vista. This item is configurable only when the **HPET Support** is set to **Enabled**. (Default: 32-bit mode)

- **Power On By Mouse**
  Allows the system to be turned on by a PS/2 mouse wake-up event.
  Note: To use this function, you need an ATX power supply providing at least 1A on the +5VSB lead.
  ▶ Disabled   Disables this function. (Default)
  ▶ Double Click   Double click on left button on the PS/2 mouse to turn on the system.

- **Power On By Keyboard**
  Allows the system to be turned on by a PS/2 keyboard wake-up event.
  Note: you need an ATX power supply providing at least 1A on the +5VSB lead.
  ▶ Disabled   Disables this function. (Default)
  ▶ Password   Set a password with 1~5 characters to turn on the system.
  ▶ Keyboard 98   Press POWER button on the Windows 98 keyboard to turn on the system.

- **KB Power ON Password**
  Set the password when **Power On by Keyboard** is set to **Password**. Press <Enter> on this item and set a password with up to 5 characters and then press <Enter> to accept. To turn on the system, enter the password and press <Enter>.
  Note: To cancel the password, press <Enter> on this item. When prompted for the password, press <Enter> again without entering the password to clear the password settings.

- **AC Back Function**
  Determines the state of the system after the return of power from an AC power loss.
  ▶ Soft-Off   The system stays off upon the return of the AC power. (Default)
  ▶ Full-On   The system is turned on upon the return of the AC power.
  ▶ Memory   The system returns to its last known awake state upon the return of the AC power.

- **ErP Support**
  Determines whether to let the system consume less than 1W power in S5 (shutdown) state. (Default: Disabled)
  Note: When this item is set to **Enabled**, the following four functions will become unavailable:
  PME event wake up, power on by mouse, power on by keyboard, and wake on LAN.

(Note)   Supported on Windows 7/Vista operating system only.

☞ **Reset Case Open Status**
  Keeps or clears the record of previous chassis intrusion status. **Enabled** clears the record of previous
  chassis intrusion status and the **Case Opened** field will show "No" at next boot. (Default: Disabled)

☞ **Case Opened**
  Displays the detection status of the chassis intrusion detection device attached to the motherboard CI
  header. If the system chassis cover is removed, this field will show "Yes", otherwise it will show "No". To
  clear the chassis intrusion status record, set **Reset Case Open Status** to **Enabled**, save the settings to
  the CMOS, and then restart your system.

☞ **Current Voltage(V) Vcore/DDR15V/+12V/Vcc3/Vtt**
  Displays the current system voltages.

- **Current System/CPU Temperature**
  Displays current system/CPU temperature.
- **Current CPU/SYSTEM/POWER FAN Speed (RPM)**
  Displays current CPU/system/power fan speed.
- **CPU Warning Temperature**
  Sets the warning threshold for CPU temperature. When CPU temperature exceeds the threshold, BIOS will emit warning sound. Options are: Disabled (default), 60ºC/140ºF, 70ºC/158ºF, 80ºC/176ºF, 90ºC/194ºF.
- **CPU/SYSTEM/POWER FAN Fail Warning**
  Allows the system to emit warning sound if the CPU/system/power fan is not connected or fails. Check the fan condition or fan connection when this occurs. (Default: Disabled)
- **CPU Smart FAN Control**
  Allows you to determine whether to enable the CPU fan speed control function and adjust the fan speed.
  ▸ Normal   Allows the CPU fan to run at different speeds according to the CPU temperature. You can adjust the fan speed with EasyTune based on your system requirements. (Default)
  ▸ Silent   Allows the CPU fan to run at slow speeds.
  ▸ Manual   Allows you to control the CPU fan speed under the **Slope PWM** item.
  ▸ Disabled   Allows the CPU fan to run at full speeds.
- **Slope PWM**
  Allows you to control the CPU fan speed. This item is configurable only when **CPU Smart FAN Control** is set to **Manual**. Options are: 0.75 PWM value /ºC ~ 2.50 PWM value /ºC.
- **CPU Smart FAN Mode**
  Specifies how to control CPU fan speed. This item is configurable only when **CPU Smart FAN Control** is enabled.
  ▸ Auto   Lets the BIOS automatically detect the type of CPU fan installed and sets the optimal CPU fan control mode. (Default)
  ▸ Voltage   Sets Voltage mode for a 3-pin CPU fan.
  ▸ PWM   Sets PWM mode for a 4-pin CPU fan.
  Note: The **Voltage** mode can be set for a 3-pin CPU fan or a 4-pin CPU fan. However, for a 4-pin CPU fan that is not designed following Intel PWM fan specifications, selecting **PWM** mode may not effectively reduce the fan speed.

2-9   Load Fail-Safe Defaults

```
                    CMOS Setup Utility-Copyright (C) 1984-2011 Award Software

     ▶   MB Intelligent Tweaker(M.I.T.)                    Load Fail-Safe Defaults
     ▶   Standard CMOS Features                            Load Optimized Defaults
     ▶   Advanced BIOS Features                            Set Supervisor Password
     ▶   Integrated Periphe
     ▶   Power Manageme              Load Fail-Safe Defaults (Y/N)? N
     ▶   PC Health Status

     ESC: Quit                      ↑↓→←: Select Item          F11: Save CMOS to BIOS
     F8: Q-Flash                    F10: Save & Exit Setup     F12: Load CMOS from BIOS
                                  Load Fail-Safe Defaults
```

Press <Enter> on this item and then press the <Y> key to load the safest BIOS default settings.
In case system instability occurs, you may try to load Fail-Safe defaults, which are the safest and most stable
BIOS settings for the motherboard.

2-10   Load Optimized Defaults

```
                    CMOS Setup Utility-Copyright (C) 1984-2011 Award Software

     ▶   MB Intelligent Tweaker(M.I.T.)                    Load Fail-Safe Defaults
     ▶   Standard CMOS Features                            Load Optimized Defaults
     ▶   Advanced BIOS Features                            Set Supervisor Password
     ▶   Integrated Periphe
     ▶   Power Manageme             Load Optimized Defaults (Y/N)? N
     ▶   PC Health Status

     ESC: Quit                      ↑↓→←: Select Item          F11: Save CMOS to BIOS
     F8: Q-Flash                    F10: Save & Exit Setup     F12: Load CMOS from BIOS
                                  Load Optimized Defaults
```

Press <Enter> on this item and then press the <Y> key to load the optimal BIOS default settings.
The BIOS defaults settings help the system to operate in optimum state. Always load the Optimized defaults
after updating the BIOS or after clearing the CMOS values.

2-11 Set Supervisor/User Password

```
                      CMOS Setup Utility-Copyright (C) 1984-2011 Award Software

    ▶   MB Intelligent Tweaker(M.I.T.)              Load Fail-Safe Defaults
    ▶   Standard CMOS Features                      Load Optimized Defaults
    ▶   Advanced BIOS Features                      Set Supervisor Password
    ▶   Integrated Periph┌─────────────────────────────────────────────┐
    ▶   Power Manageme    │    Enter Password:                          │
    ▶   PC Health Status  └─────────────────────────────────────────────┘

    ESC: Quit                       ↑↓→←: Select Item          F11: Save CMOS to BIOS
    F8: Q-Flash                     F10: Save & Exit Setup     F12: Load CMOS from BIOS
                            Change/Set/Disable Password
```

Press <Enter> on this item and type the password with up to 8 characters and then press <Enter>. You will be requested to confirm the password. Type the password again and press <Enter>.

The BIOS Setup program allows you to specify two separate passwords:

☞ **Supervisor Password**

When a system password is set and the **Password Check** item in **Advanced BIOS Features** is set to **Setup**, you must enter the supervisor password for entering BIOS Setup and making BIOS changes.

When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup and when entering BIOS Setup.

☞ **User Password**

When the **Password Check** item is set to **System**, you must enter the supervisor password (or user password) at system startup to continue system boot. In BIOS Setup, you must enter the supervisor password if you wish to make changes to BIOS settings. The user password only allows you to view the BIOS settings but not to make changes.

To clear the password, press <Enter> on the password item and when requested for the password, press <Enter> again. The message "PASSWORD DISABLED" will appear, indicating the password has been cancelled.

2-12 Save & Exit Setup

```

                                   Abandon all Data
```

Press <Enter> on this item and press the <Y> key. This exits the BIOS Setup without saving the changes made in BIOS Setup to the CMOS. Press <N> or <Esc> to return to the BIOS Setup Main Menu.

Chapter 3   Drivers Installation

- Before installing the drivers, first install the operating system.
- After installing the operating system, insert the motherboard driver disk into your optical drive. The driver Autorun screen is automatically displayed which looks like that shown in the screen shot below. (If the driver Autorun screen does not appear automatically, go to My Computer, double-click the optical drive and execute the **Run**.exe program.)

## 3-1   Installing Chipset Drivers

Now Loading Please wait...

After inserting the driver disk, "Xpress Install" will automatically scan your system and then list all the drivers that are recommended to install. You can click the **Install All** button and "Xpress Install" will install all the recommended drivers. Or click **Install Single Items** to manually select the drivers you wish to install.
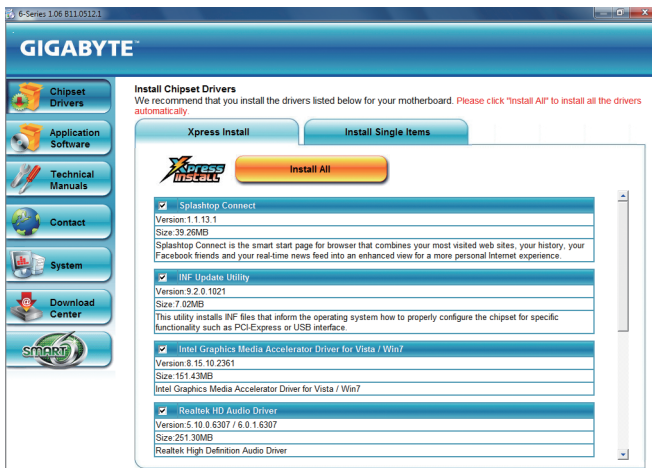

- Please ignore the popup dialog box(es) (e.g. the **Found New Hardware Wizard**) displayed when "Xpress Install" is installing the drivers. Failure to do so may affect the driver installation.
- Some device drivers will restart your system automatically during the driver installation. After the system restart, "Xpress Install" will continue to install other drivers.
- After "Xpress Install" installs all of the drivers, a dialog box will appear asking whether to install new GIGABYTE utilities. Click **Yes** to automatically install the utilities. Or click **No** if you want to manually select the utilities to install on the **Application Software** page later.
- For USB 2.0 driver support under the Windows XP operating system, please install the Windows XP Service Pack 1 or later. After installing the SP1 (or later), if a question mark still exists in **Universal Serial Bus Controller** in **Device Manager**, please remove the question mark (by right-clicking your mouse and select **Uninstall**) and restart the system. (The system will then autodetect and install the USB 2.0 driver.)

3-2   Application Software

This page displays all the utilities and applications that GIGABYTE develops and some free software. You can click the **Install** button on the right of an item to install it.
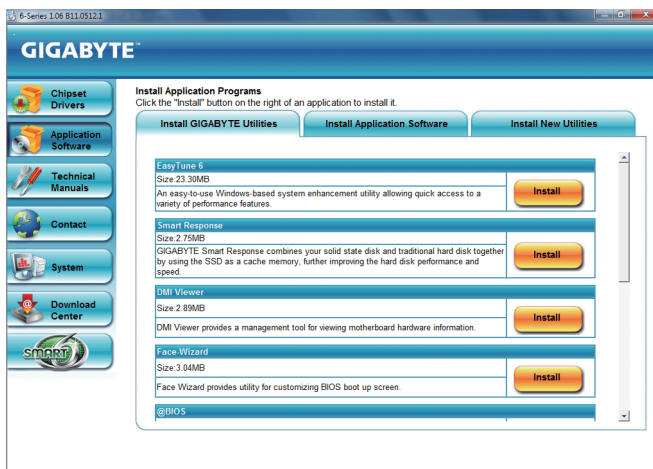

3-3   Technical Manuals

This page provides GIGABYTE's application guides, content descriptions for this driver disk, and the motherboard manuals.
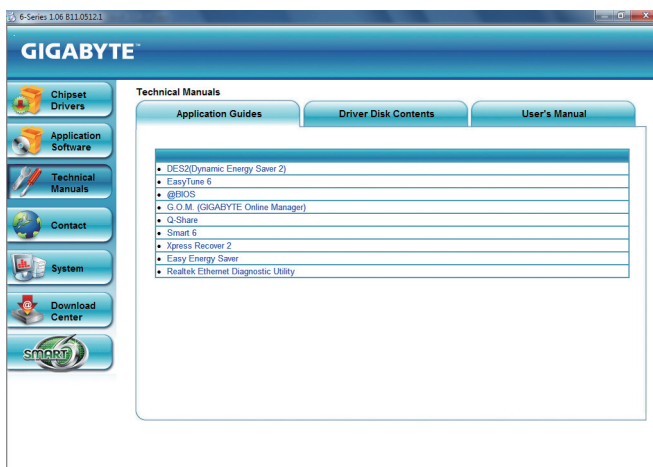

3-4 Contact

For the detailed contact information of the GIGABYTE Taiwan headquarter or worldwide branch offices, click the URL on this page to link to the GIGABYTE website.

3-5 System

This page provides the basic system information.
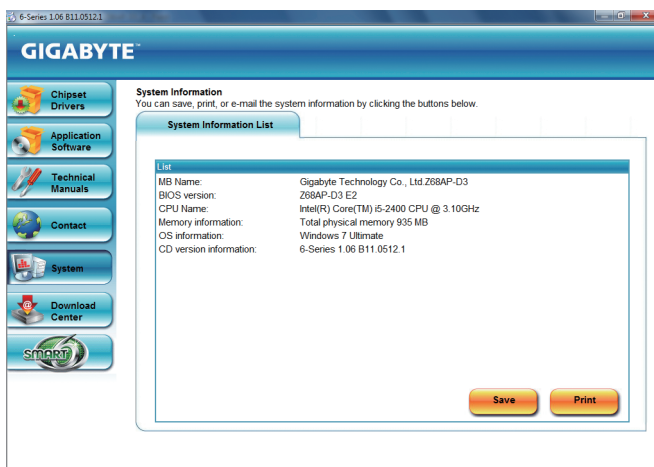

3-6   Download Center

To update the BIOS, drivers, or applications, click the **Download Center** button to link to the GIGABYTE website. The latest version of the BIOS, drivers, or applications will be displayed.
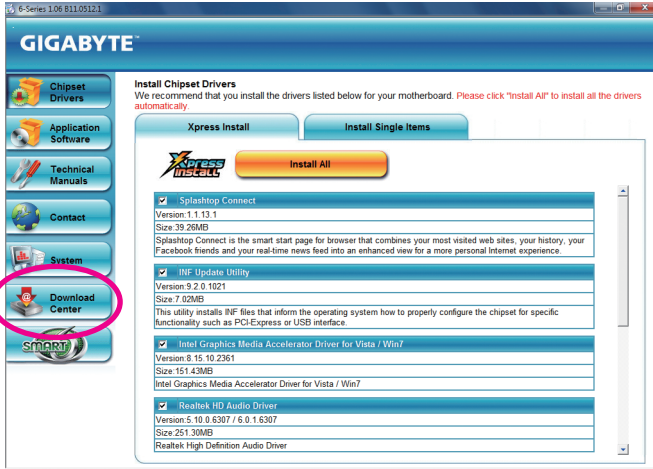

3-7   New Utilities

This page provides a quick link to GIGABYTE's lately developed utilities for users to install. You can click the **Install** button on the right of an item to install it.

Chapter 4   Unique Features

4-1   Xpress Recovery2

Xpress Recovery2 is a utility that allows you to quickly compress and back up your system data and perform restoration of it. Supporting NTFS, FAT32, and FAT16 file systems, Xpress Recovery2 can back up data on PATA and SATA hard drives and restore it.

Before You Begin:
- Xpress Recovery2 will check the first physical hard drive for the operating system. Xpress Recovery2 can only back up/restore the first physical hard drive that has the operating system installed.
- As Xpress Recovery2 will save the backup file at the end of the hard drive, make sure to leave enough un-allocated space in advanced (10 GB or more is recommended; actual size requirements vary, depending on the amount of data).
- It is recommended to back up your system soon after the operating system and drivers are installed.
- The amount of data and hard drive access speed may affect the speed at which the data is backed up/restored.
- It takes longer to back up a hard drive than to restore it.

System Requirements:
- At least 512 MB of system memory
- VESA compatible graphics card
- Windows XP with SP1 or later, Windows Vista, Windows 7

- Xpress Recovery and Xpress Recovery2 are different utilities. For example, a backup file created with Xpress Recovery cannot be restored using Xpress Recovery2.
- USB hard drives are not supported.
- RAID drives are not supported.
- GPT partitions are not supported.
- Hard drives larger than 2.2 TB are not supported.

Installation and Configuration:

Turn on your system to boot from the Windows Vista setup disk.

A. Installing Windows Vista and Partitioning the Hard Drive
Step 1:
Click **Drive options**.
Step 2:
Click **New**.

(Note) Xpress Recovery2 checks the first physical hard drive in the following sequence: The first SATA connector, the second SATA connector and so forth. For example, When hard drives are attached to the first and third SATA connectors, the hard drive on the first SATA connector is the first physical drive.
Step 3:
When partitioning your hard drive, make sure to leave unallocated space (10 GB or more is recommended; actual size requirements vary, depending on the amount of data) and begin the installation of the operating system.
Step 4:
After the operating system is installed, click **Start**, right-click the **Computer** and select **Manage**. Go to **Disk Management** to check disk allocation.
Step 5:
Xpress Recovery2 will save the backup file to the unallocated space (black stripe along the top). Please note that if there is no enough unallocated space, Xpress Recovery2 cannot save the backup file.

B. Accessing Xpress Recovery2
1.	Boot from the motherboard driver disk to access Xpress Recovery2 for the first time. When you see the following message: `Press any key to startup Xpress Recovery2`, press any key to enter Xpress Recovery2.
2.	After you use the backup function in Xpress Recovery2 for the first time, Xpress Recovery2 will stay permanent in your hard drive. If you wish to enter Xpress Recovery2 later, simply press <F9> during the POST.

C. Using the Backup Function in Xpress Recovery2

Step 1:
Select **BACKUP** to start backing up your hard drive data.

Xpress Recovery2 will automatically create a new partition to store the backup image file.
Step 2:
When finished, go to **Disk Management** to check disk allocation.

D. Using the Restore Function in Xpress Recovery2

Select **RESTORE** to restore the backup to your hard drive in case the system breaks down. The **RESTORE** option will not be present if no backup is created before.

E. Removing the Backup

Step 1:
If you wish to remove the backup file, select **REMOVE**.
Step 2:
After the backup file is removed, no backup image file will be present in **Disk Management** and hard drive space will be freed up.

F. Exiting Xpress Recovery2

Select **REBOOT** to exit Xpress Recovery2.

4-2 BIOS Update Utilities

GIGABYTE motherboards provide two unique BIOS update tools, Q-Flash™ and @BIOS™. GIGABYTE Q-Flash and @BIOS are easy-to-use and allow you to update the BIOS without the need to enter MS-DOS mode. Additionally, this motherboard features the DualBIOS™ design, which enhances protection for the safety and stability of your computer by adding one more physical BIOS chip.

What is DualBIOS™?

Motherboards that support DualBIOS have two BIOS onboard, a main BIOS and a backup BIOS. Normally, the system works on the main BIOS. However, if the main BIOS is corrupted or damaged, the backup BIOS will take over on the next system boot and copy the BIOS file to the main BIOS to ensure normal system operation. For the sake of system safety, users cannot update the backup BIOS manually.

What is Q-Flash™?

With Q-Flash you can update the system BIOS without having to enter operating systems like MS-DOS or Window first. Embedded in the BIOS, the Q-Flash tool frees you from the hassles of going through complicated BIOS flashing process.

What is @BIOS™?

@BIOS allows you to update the system BIOS while in the Windows environment. @BIOS will download the latest BIOS file from the nearest @BIOS server site and update the BIOS.

4-2-1 Updating the BIOS with the Q-Flash Utility

A. Before You Begin
1. From GIGABYTE's website, download the latest compressed BIOS update file that matches your motherboard model.
2. Extract the file and save the new BIOS file (e.g. z68apd3.f1) to your USB flash drive, or hard drive. Note: The USB flash drive or hard drive must use FAT32/16/12 file system.
3. Restart the system. During the POST, press the <End> key to enter Q-Flash. Note: You can access Q-Flash by either pressing the <End> key during the POST or pressing the <F8> key in BIOS Setup. However, if the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent SATA controller, use the <End> key during the POST to access Q-Flash.

```

.
.
.
<DEL>: BIOS Setup  <F9>: XpressRecovery2  <F12>: Boot Menu  <End>: Qflash
05/12/2011-Z68-7A89WG0DC-00
```
Because BIOS flashing is potentially risky, please do it with caution. Inadequate BIOS flashing may result in system malfunction.

B. Updating the BIOS

When updating the BIOS, choose the location where the BIOS file is saved. The following procedure assumes that you save the BIOS file to a USB flash drive.

Step 1:
1.   Insert the USB flash drive containing the BIOS file into the computer. In the main menu of Q-Flash, use the up or down arrow key to select **Update BIOS from Drive** and press <Enter>.

   - The **Save Main BIOS to Drive** option allows you to save the current BIOS file.
   - Q-Flash only supports USB flash drive or hard drives using FAT32/16/12 file system.
     - If the BIOS update file is saved to a hard drive in RAID/AHCI mode or a hard drive attached to an independent SATA controller, use the <End> key during the POST to access Q-Flash.

2.   Select **HDD 1-0** and press <Enter>.

<table>
<tr><td colspan="3">Q-Flash Utility v2.23</td></tr>
<tr><td>Flash Type/Size.................................</td><td>MXIC 25L3206E</td><td>4M</td></tr>
<tr><td colspan="3">0 file(s) found</td></tr>
<tr><td>HDD 1-0</td><td></td><td><Drive></td></tr>
<tr><td>Enter</td><td></td><td>Off</td></tr>
<tr><td>Total size : 0</td><td>Free size : 0</td><td></td></tr>
</table>
3.   Select the BIOS update file and press <Enter>.

   Make sure the BIOS update file matches your motherboard model.

Step 2:
The process of the system reading the BIOS file from the USB flash drive is displayed on the screen. When the message "Are you sure to update BIOS?" appears, press <Enter> to begin the BIOS update. The monitor will display the update process.

   - **Do not turn off or restart the system when the system is reading/updating the BIOS.**
   - **Do not remove the USB flash drive or hard drive when the system is updating the BIOS.**

Step 3:
When the update process is complete, press any key to return to the main menu.

<table>
<tr><td colspan="3">Q-Flash Utility v2.23</td></tr>
<tr><td>Flash Type/Size.................................</td><td>MXIC 25L3206E</td><td>4M</td></tr>
<tr><td colspan="3">!! Copy BIOS completed - Pass !!</td></tr>
<tr><td colspan="3">Please press any key to continue</td></tr>
<tr><td>Enter</td><td></td><td>Off</td></tr>
</table>
Step 4:
Press <Esc> and then <Enter> to exit Q-Flash and reboot the system. As the system boots, you should see the new BIOS version is present on the POST screen.

Step 5:
During the POST, press <Delete> to enter BIOS Setup. Select **Load Optimized Defaults** and press <Enter> to load BIOS defaults. System will re-detect all peripheral devices after a BIOS update, so we recommend that you reload BIOS defaults.

```
CMOS Setup Utility-Copyright (C) 1984-2011 Award Software

  ▶   MB Intelligent Tweaker(M.I.T.)              Load Fail-Safe Defaults
  ▶   Standard CMOS Features                      Load Optimized Defaults
  ▶   Advanced BIOS Features                      Set Supervisor Password
  ▶   Integrated Periph
  ▶   Power Manageme          Load Optimized Defaults (Y/N)? Y

                                Load Optimized Defaults
```

Press <Y> to load BIOS defaults

Step 6:
Select **Save & Exit Setup** and then press <Y> to save settings to CMOS and exit BIOS Setup. The procedure is complete after the system restarts.

4-2-2 Updating the BIOS with the @BIOS Utility

A. Before You Begin

1. In Windows, close all applications and TSR (Terminate and Stay Resident) programs. This helps prevent unexpected failures when performing a BIOS update.
2. During the BIOS update process, ensure the Internet connection is stable and do NOT interrupt the Internet connection (for example, avoid a power loss or switching off the Internet). Failure to do so may result in a corrupted BIOS or a system that is unable to start.
3. Do not use the G.O.M. (GIGABYTE Online Management) function when using @BIOS.
4. GIGABYTE product warranty does not cover any BIOS damage or system failure resulting from an inadequate BIOS flashing.

B. Using @BIOS

1. **Update the BIOS Using the Internet Update Function:**
    Click **Update BIOS from GIGABYTE Server**, select the @BIOS server site closest to your location and then download the BIOS file that matches your motherboard model. Follow the on-screen instructions to complete.
    > If the BIOS update file for your motherboard is not present on the @BIOS server site, please manually download the BIOS update file from GIGABYTE's website and follow the instructions in "Update the BIOS without Using the Internet Update Function" below.

2. **Update the BIOS without Using the Internet Update Function:**
    Click **Update BIOS from File**, then select the location where you save the BIOS update file obtained from the Internet or through other source. Follow the on-screen instructions to complete.

3. **Save the Current BIOS File:**
    Click **Save Current BIOS to File** to save the current BIOS file.

4. **Load BIOS Defaults after BIOS Update:**
    Select the **Load CMOS default after BIOS update** check box and then the system will automatically load BIOS defaults after BIOS update and after the system restarts.

C. After Updating the BIOS

Restart your system after updating the BIOS.

> ⚠ **Make sure that the BIOS file to be flashed matches your motherboard model. Updating the BIOS with an incorrect BIOS file could cause your system not to boot.**

4-3 EasyTune 6

GIGABYTE's EasyTune 6 is a simple and easy-to-use interface that allows users to fine-tune their system settings or do overclock/overvoltage in Windows environment. The user-friendly EasyTune 6 interface also includes tabbed pages for CPU and memory information, letting users read their system-related information without the need to install additional software.

The EasyTune 6 Interface

Tabs Information

Tab	Function
CPU	The **CPU** tab provides information on the installed CPU and motherboard.
Memory	The **Memory** tab provides information on the installed memory module(s). You can select memory module on a specific slot to see its information.
Tuner	The **Tuner** tab allows you to change system clock settings and voltages. • **Quick Boost mode** provides you with 3 levels of CPU frequency/base clock to choose to achieve desired system performance. (Note) After making changes in **Quick Boost mode** or clicking **Default** to restore to default values, be sure to restart your system for these changes to take effect. • **Easy mode** allows you to adjust the CPU base clock only. • **Advanced mode** allows you to individually change system clock settings and voltages settings using the sliders. • **Save** allows you to save the current settings to a new profile (.txt file). • **Load** allows you to load previous settings from a profile. After making changes in **Easy mode**/**Advanced mode**, be sure to click **Set** for these changes to take effect or click **Default** to restore to default values.
Graphics	The **Graphics** tab allows you to change the core clock and memory clock for your ATI or NVIDIA graphics card.
Smart	The **Smart** tab allows you to specify a Smart Fan mode. Smart Fan Advanced mode allows the CPU fan speed to be changed linearly based on the CPU temperature thresholds you set.
HW Monitor	The **HW Monitor** tab allows you to monitor hardware temperature, voltage and fan speed and set temperature/fan speed alarm. You can choose the alert sound from the buzzer or use your own sound file (.wav file).

(Note) Due to the hardware limitation, you must install a DDR3 1066 MHz memory module(s) (or above) to enable support for Quick Boost.

Available functions in EasyTune 6 may differ by motherboard model. Grayed-out area(s) indicates that the item is not configurable or the function is not supported.

Incorrectly doing overclock/overvoltage may result in damage to the hardware components such as CPU, chipset, and memory and reduce the useful life of these components. Before you do the overclock/overvoltage, make sure that you fully know each function of EasyTune 6, or system instability or other unexpected results may occur.

4-4   Q-Share

Q-Share is an easy and convenient data sharing tool. After configuring your LAN connection settings and Q-Share, you are able to share your data with computers on the same network, making full use of Internet resources.
Directions for using Q-Share
After installing Q-Share from the motherboard driver disk, go to Start>All Programs>GIGABYTE>Q-Share. exe to launch the Q-Share tool. Find the **Q-Share** icon   in the notification area and right-click on this icon to configure the data sharing settings.

Figure 1. Data Sharing Disabled   Figure 2. Data Sharing Enabled

Options Descriptions
Option	Description
Connect ...	Displays the computers with data sharing enabled
Enable Incoming Folder ...	Enables data sharing
Disable Incoming Folder ...	Disables data sharing
Open Incoming Folder : C:\Q-ShareFolder	Accesses the shared data folder
Change Incoming Folder : C:\Q-ShareFolder	Changes the data folder to be shared [(Note)]
Update Q-Share ...	Updates Q-Share online
About Q-Share ...	Displays the current Q-Share version
Exit...	Exits Q-Share

(Note)   This option is available only when data sharing is NOT enabled.

4-5   Smart 6™

GIGABYTE Smart 6™ (Note 1) is designed with user-friendliness in mind, and offers a combination of 6 innovative software utilities that provide easier and smarter PC system management. Smart 6™ allows you to speed up system performance, reduce boot-up time, manage a secure platform and recover specified files easily with a click of the mouse button.

SMART QuickBoot

SMART QuickBoot speeds up the system boot-up process and shortens the waiting time for entering the operating system, delivering greater efficiency for daily use.

Instructions:

Select the **Enable** check box below the **BIOS QuickBoot** or **OS QuickBoot** item and then click **Save** to save the settings.

SMART QuickBoost

SMART QuickBoost features quick and effortless CPU overclocking for novice and experienced users alike; users simply click on one of the three levels of CPU performance enhancement, and SMART QuickBoost automatically adjusts CPU performance.
Instructions:

Select a CPU performance boost level and restart your computer for the changes to take effect.

Whether SMART QuickBoost is supported depends on the motherboard model.

SMART Recovery 2

Smart Recovery 2 allows you to back up a partition as an image file every hour. You can use these images to restore your system or files when needed.

The Smart Recovery 2 main menu:

Button	Function
Settings	Allows you to select the source and destination partition
Backup Now	Allows you to perform the backup immediately
File Recovery...	Allows you to recover your files from the backup image
System Recovery...	Allows you to recover your system from the backup image

- Supported operating systems: Windows 7 and Vista.
- Smart Recovery 2 only supports NTFS file system.
- You need to select the destination partition in Settings the first time you use Smart Recovery 2.
- The **Backup Now** button will be available only after you log in Windows for ten minutes.
Creating a backup:

Click the **Settings** button on the main menu. In the **Settings** dialog box, select the source partition and destination partition and click **OK**. The initial backup will start after 10 minutes and regular backup will be performed hourly. Note: By default, all partitions on the system drive are selected as the backup source. The backup destination cannot be on the same partition as the backup source.
Recovering a file:

Click the **File Recovery** button on the main menu. Use the time slider on the top of the popped out window to select a previous backup time. The right pane will display the backed-up partitions in the backup destination (in the **My Backup** folder). Browse to the file you want and copy it.
Recovering your system with Smart Recovery 2 (Windows 7 only):

Steps:
1. Click the **System Recovery** button on the main menu.
2. Select the partition where your backup is saved.
3. Use the time slider to select a time point.
4. Select a partition backup created on the selected time point and click **Restore**.
5. Confirm whether to restart your system to proceed with the restore immediately or later. Once you respond "Yes" the system will re-start to the Windows recovery environment. Follow the on-screen instructions to restore your system.

> • For Windows Vista, refer to the steps below to use the original Windows installation disk for system recovery.
> • All of your files and programs will be deleted and replaced with those on the selected backup. If needed, be sure to make a copy of your data before the restore.

Recovering your system using the original Windows installation disk:

In case Windows or your hard drive has serious errors, use the original Windows installation disk for system recovery.

Steps:
1. Restart your computer to boot from the original Windows installation disk.
2. When the Windows installation screen appears, select your language and click **Next**.
3. Select **Repair your computer**.
4. Select **Restore your computer using a system image that you created earlier** and then click **Next**.
5. Select the backup you want to use and then follow the on-screen instructions to complete.

> For further instructions, refer to the Help file of Smart Recovery 2.

SMART DualBIOS

SMART DualBIOS is a new feature that can record personal passwords and important dates, and remind users of the dates. It also stores the recorded data in the main and backup BIOS simultaneously, which can prevent loss of the data in case the system/hard drive fails.

Instructions:

Enter the Smart 6™ password to launch the SMART DualBIOS utility. You can record personal passwords and important dates and set re-minders of these dates. Click Save to save the settings and click Exit to exit.

SMART Recorder

SMART Recorder monitors and records the activities in a system such as the time when the computer was turned on/off or even when large data files were moved within the hard drive or copied to an external storage device (Note 2).

Instructions:

Select the **Enable** check box at the bottom of the **ON/OFF Recorder** or **File Monitor** tab to enable the recording of system on/off time or files copying. Entering the Smart 6™ password is required before you make any changes to the previous settings.

SMART TimeLock

SMART TimeLock allows users to effectively manage computer usage time with simple rules and options.

Instructions (Note 3)**:**

Click the lock icon on the bottom left corner and enter the Smart 6™ password. Set the time when a user can or cannot use your computer for weekdays and weekends. Click **Save** to save the settings and click **Exit** to exit.

The **Smart TimeLock** Alert:

An alert will appear 15 minutes and 1 minute prior to the default shutdown time. When the alert appears, you can enter the Smart 6™ password to extend the usage time or click **Cancel** to close the alert. If you respond **Cancel**, you will be requested to enter the password to extend the usage time again when the default shutdown time arrives, or the computer will shutdown right away.

(Note 1) When launching Smart 6™ for the first time, the system will request you to set up a password. This password is required when you activate SMART DualBIOS or when you want to make changes to the SMART Recorder or SMART TimeLock settings.

(Note 2) You will not be able to use the "Safely Remove Hardware" feature in the operating system with SMART Recorder enabled. To remove an external storage device, unplug it directly from your computer (please note that doing so may result in damage to the hardware device or loss of data).

(Note 3) You can set the User Password in the system BIOS Setup program to prevent the system time being changed by other users.

4-6 Auto Green

Auto Green is an easy-to-use tool that provides users with simple options to enable system power savings via a Bluetooth cell phone. When the phone is out of the range of the computer's Bluetooth receiver, the system will enter the specified power saving mode.
The Configuration dialog box:
First, you have to set your Bluetooth cell phone as a portable key. On the Auto Green main menu, click **Configure** and then click **Configure BT devices**. Select the Bluetooth cell phone that you want to use as the portable key [(Note 1)]. (If the screen doesn't display your Bluetooth cell phone, click **Refresh** to let Auto Green re-detect the device.)

> Before creating a Bluetooth cell phone key, make sure your motherboard has a Bluetooth receiver and you have turned on the search and Bluetooth functions on your phone.
Configuring the Bluetooth cell phone key:
After you select a cell phone, the **Add device** as shown on the left will appear. Enter a passkey (8~16 digits recommended) which will be used for pairing with the cell phone. Then enter the same passkey on your cell phone.
Configuring other Bluetooth settings:
On the **Other Settings** tab, you can set how much time it takes to scan your Bluetooth cell phone key, how many times to rescan the key to make sure it is in range of your computer, and when to turn off the hard drive if the system energy saving state lasts over the predetermined period of time. After completing the settings, click **Set** for the settings to take effect and then click **Exit** to quit.

• Device Scan Time (sec.):
  Set the length of time Auto Green scans your Bluetooth cell phone key, ranging from 5 to 30 seconds in 5-second increment. Auto Green searches for the key based on the length of time you set.
• Rescan Times:
  Set how many times Auto Green will rescan your Bluetooth cell phone key if it does not detect it, ranging from 2 to 5 times. Auto Green will keep rescanning according to the times you set. When the times limit is reached and your Bluetooth cell phone key is still not detected, the system will enter the selected energy saving mode.
• Turn off HD:
  Set when to turn off the hard drive. If the system inactivity time exceeds the specified time limit, the hard drive will be turned off.

Selecting a system energy saving mode:
Depending on your needs, select a system power saving mode on the Auto Green main menu and click **Save** to save the settings.

Button	Description
Standby	Enters Power on Suspend mode
Suspend	Enters Suspend to RAM mode
Disable	Disables this function

> The Bluetooth dongle included in the motherboard package[(Note 2)] allows you to wake up the system from Suspend to RAM mode without the need to press the power button first.

(Note 1)   If your cell phone has been configured as the Auto Green key, you'll not be able to use it to connect to other Bluetooth device(s) when Auto Green is enabled.
(Note 2)   Whether the Bluetooth dongle is included depends on the motherboard models. Before installing the Bluetooth dongle, be sure to turn off other Bluetooth receiver on your computer.

4-7   eXtreme Hard Drive (X.H.D)

With GIGABYTE eXtreme Hard Drive (X.H.D) [Note 1], users can quickly configure a RAID-ready system for RAID 0 when a new SATA drive is added. For a RAID 0 array that al-ready exists, users also can use X.H.D to easily add a hard drive into the array to expand its capacity. All with a simple click of a button, X.H.D helps to enhance your hard drive read/write performance without the need for complex and time-consuming configurations. The following procedure details the steps to set up a RAID-ready system and configure it for RAID 0.

A. Setting Up a RAID-Ready System

Step 1: Configure the system BIOS
Enter the system BIOS Setup program, set **eXtreme Hard Drive (X.H.D)** under the **Integrated Peripherals** menu to **Enabled** to enable RAID for the Intel SATA controllers.

Step 2: Install the RAID driver and operating system
The X.H.D utility supports Windows 7/Vista/XP. Before installing the operating system, you have to load the SATA controller driver first. Without the driver, the hard drive may not be recognized during the Windows setup process. (For more details, refer to Chapter 5, "Installing the SATA RAID/AHCI Driver and Operating System.")

Step 3: Install the motherboard drivers and the X.H.D utiltiy
After installing the operating system, insert the motherboard driver disk. You can click the Xpress Install All button to automatically install all motherboard drivers, including the X.H.D utility. Or you can go to the Applica-tion Software screen to individually install the X.H.D utility later.

B. Using GIGABYTE eXtreme Hard Drive (X.H.D)

Instructions: [Note 2]
Before launching X.H.D, make sure the newly added hard-drive has equal or greater capacity than the RAID-ready sys-tem drive. (To add a new hard drive into a RAID 0 array that's been created earlier, make sure the new drive is greater than or equal to the biggest drive in the array.)

1.   **To automatically set up a RAID 0 array:**
    Click **Auto** to automatically and quickly set up a RAID 0 array.

2.   **To manually set up a RAID array:** [Note 3]
    Click **Manual** to access the Intel Rapid Storage Technology, with which you can build a RAID 0, RAID 1, or other supported RAID array depending on your needs and hardware components.

3.   **Exits the X.H.D utility:**
    Click **Cancel** to exit the X.H.D utility.

(Note 1)   The X.H.D utility only supports the SATA controllers integrated in the Intel Chipset.
(Note 2)   It is recommended that before you run the X.H.D utility, back up all of your data to avoid risk of hardware damage or lost of data.
(Note 3)   If you manually build a non-RAID 0 array, you'll not be able to automatically set up a RAID 0 array later using the **Auto** function.

4-8   Cloud OC

 Cloud OC [(Note 1)] is an easy-to-use overclocking utility designed for system overclock-ing via virtually any Internet-connected device, such as a smart phone, iPhone, note-book PC, etc. By simply connecting to an Internet browser via LAN, wireless LAN, or Bluetooth [(Note 2)] and logging in to the Cloud OC server, you can easily access three major functions of Cloud OC, including Tuner (system tweaking), System Info (system monitoring), and Control (system status control).

A. Launching Cloud OC

Step 1:

The first time you launch Cloud OC, the system will request you to set up a password which will be required for login to the Cloud OC server.

Step 2:
 Find the **Cloud OC** icon in the notification area and right click the icon to select **Start Server** to launch the Cloud OC server. The Cloud OC server will provide a dedicated IP and you can enter this IP address in an Internet-connected browser to log in to the Cloud OC server later.

Step 3:

 When the Cloud OC web page ap-pears, click **Login**, enter the previously configured pass-word, and then click **Send** and you will be able to view your system status.

B. Directions for use [(Note 3)]

- **Tuner** (System Tweaking):
  The **Tuner** tab provides a full range of tweaking options that include CPU, memory, graphics, and PCIe frequencies and voltages. Click the <+> or <-> but-ton under an item you want to configure or directly enter a value, and click **Set XXXX** to complete.

- **System Info** (System Monitoring):
  The **System Info** tab enables real time PC system status monitoring for values such as CPU temperature, cooling fan speeds, CPU VCore and system tem-perature.
- **Control** (System Status Control):
  The **Control** tab allows for controlling system power states with restart, power off, suspend, and hibernate options.

(Note 1)   Supported on Windows 7, Vista, and XP. For Windows XP, be sure to update Internet Explorer to version 7.0 or later. When using Cloud OC, make sure the Internet connection is normal. Cloud OC will be unable to connect to the remote computer when the Internet is disconnected or when the remote computer is in power off , standby, or hibernation mode.
(Note 2)   Bluetooth PAN (Personal Area Network) support is required.
(Note 3)   Available functions may differ by motherboard model.

4-9   TouchBIOS

TouchBIOS allows you to configure your BIOS settings in Windows environment with a click of your mouse and a touch of your screen.

The TouchBIOS Interface

Button Information Table

Button	Description	Button	Description
	Allows you to change CPU ratio, BCLK, memory speed, Vcore and memory voltages.		Allows you to configure Integrated Peripherals settings.
	Allows you to configure Advanced BIOS Features.		Allows you to configure Power Management settings.
	Enables QuickBoost utility. Provides quick and effortless CPU overclocking for novice and experienced users alike.		Loads Optimized Defaults.
	Displays system health status, including system temperature, fan speeds, and voltage values.		Sets Supervisor Password.
	Enables @BIOS utility to update the BIOS.

Chapter 5   Appendix

5-1   Configuring SATA Hard Drive(s)

To configure SATA hard drive(s), follow the steps below:
 A.   Install SATA hard drive(s) in your computer.
 B.   Configure SATA controller mode in BIOS Setup.
 C.   Configure a RAID array in RAID BIOS. (Note 1)
 D.   Install the SATA RAID/AHCI driver (Note 2) and operating system.

Before you begin

Please prepare:
 • At least two SATA hard drives (to ensure optimal performance, it is recommended that you use two hard drives with identical model and capacity). If you do not want to create RAID, you may prepare only one hard drive.
 • Windows 7/Vista/XP setup disk.
 • Motherboard driver disk.
 • A USB floppy disk drive (needed during Windows XP installation)
 • An empty formatted floppy disk (needed during Windows XP installation)

5-1-1   Configuring Intel Z68 SATA Controllers

A. Installing SATA hard drive(s) in your computer
Attach one end of the SATA signal cable to the rear of the SATA hard drive and the other end to available SATA port (Note 3) on the motherboard. Then connect the power connector from your power supply to the hard drive.

(Note 1)   Skip this step if you do not want to create RAID array on the SATA controller.
(Note 2)   Required when the SATA controller is set to AHCI or RAID mode.
(Note 3)   When a RAID set is built across the SATA 6Gb/s and SATA 3Gb/s channels, the system perfor-mance of the RAID set may vary depending on the devices being connected.

B. Configuring SATA controller mode in BIOS Setup

Make sure to configure the SATA controller mode correctly in system BIOS Setup.

Step 1:
Turn on your computer and press <Delete> to enter BIOS Setup during the POST (Power-On Self-Test). To create RAID, set **PCH SATA Control Mode** under the **Integrated Peripherals** menu to **RAID(XHD)** (Figure 1) (**IDE** by default). If you do not want to create RAID, set this item to **IDE** or **AHCI**.

Figure 1

Step 2:
Save changes and exit BIOS Setup.

The BIOS Setup menus described in this section may differ from the exact settings for your motherboard. The actual BIOS Setup menu options you will see shall depend on the motherboard you have and the BIOS version.

C. Configuring a RAID array in RAID BIOS

Enter the RAID BIOS setup utility to configure a RAID array. Skip this step and proceed with the installation of Windows operating system for a non-RAID configuration.

Step 1:

After the POST memory test begins and before the operating system boot begins, look for a message which says "Press <Ctrl-I> to enter Configuration Utility" (Figure 2). Press <Ctrl> + <I> to enter the RAID Configuration Utility.

          [↑↓]-Select                 [ESC]-Exit                 [ENTER]-Select Menu
```

Figure 7

To exit the RAID BIOS utility, press <Esc> or select **6. Exit** in **MAIN MENU**.

Now, you can proceed to create the SATA RAID/AHCI driver diskette and install the SATA RAID/AHCI driver and operating system.

Recovery Volume Options

Intel Rapid Recover Technology provides data protection by allowing users to easily restore data and system operation using a designated recovery drive. With the Rapid Recovery Technology, which employs RAID 1 functionality, users can copy the data from the master drive to the recovery drive; if needed, the data on the recovery drive can be restored back to the master drive.

Before you begin:
• The recovery drive must have equal or greater capacity than the master drive.
• A recovery volume can be created with two hard drives only. A recovery volume and a RAID array cannot co-exist in the system at the same time, that is, if you have already created a recovery volume, you are unable to create a RAID array.
• By default, only the master drive can be viewed in the operating system; the recovery drive is hidden.

Step 1:
Select **Create RAID Volume** in **MAIN MENU** and press <Enter> (Figure 8).

```
                   Intel(R) Rapid Storage Technology - Option ROM - 10.5.0.1034

Step 4:

Under **Sync**, select **Continuous** or **On Request** (Figure 11). When set to **Continuous**, changes made to the data on the master drive will be automatically and continuously copied to the recovery drive when both hard drives are installed in the system. **On Request** allows users to update data from the master drive to the recovery drive manually using the Intel Rapid Storage Technology utility in the operating system. **On Request** also allows users to restore the master drive to a previous state.

```

                       ═══ [ CREATE VOLUME MENU ] ═══
                              Name :    Volume0
                          RAID Level :   Recovery
                              Disks :   Select Disks
                          Strip Size :   N/A
                           Capacity :   117.7 GB
                              Sync :    Continuous
                                        Create Volume
                       ═══ [ HELP ] ═══

                              Select a sync option:
                       On Request: volume is updated manually
                       Continuous: volume is updated automatically

       [↑↓]-Change          [TAB]-Next          [ESC]-Previous Menu          [ENTER]-Select
```
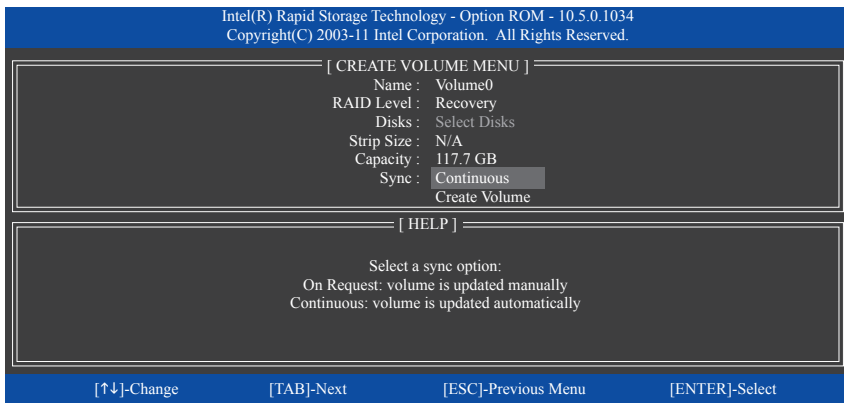

Figure 11

Step 5:

Finally press <Enter> on the **Create Volume** item to begin creating the Recovery Volume and follow the on-screen instructions to complete.

Delete RAID Volume

To delete a RAID array, select **Delete RAID Volume** in **MAIN MENU** and press <Enter>. In the **DELETE VOLUME MENU** section, use the up or down arrow key to select the array to be deleted and press <Delete>. When prompted to confirm your selection (Figure 12), press <Y> to confirm or <N> to abort.

[DELETE VOLUME MENU]

Name	Level	Drives	Capacity	Status	Bootable
Volume0	RAID0(Stripe)	2	223.6GB	Normal	Yes

[DELETE VOLUME VERIFICATION]

ALL DATA IN THE VOLUME WILL BE LOST!
(This does not apply to Recovery volumes)
Are you sure you want to delete "Volume0"? (Y/N) :

* = Accelerated Volume

Deleting a volume will reset the disks to non-RAID.
WARNING: ALL DISK DATA WILL BE DELETED.
(This does not apply to Recovery volumes)

[↑↓]-Select   [ESC]- Previous Menu   [DEL]-Delete Volume

Figure 12

Acceleration Options

This option allows you to view the status of your accelerated drive/volume (Figure 13) created using the Intel IRST utility. In case you are unable to run the Intel IRST utility due to an application error or operating system issue, you will need to remove acceleration or manually enable synchronization (Maximized mode only) using this option in the RAID ROM utility.

Steps:

Select **Acceleration Options** in **MAIN MENU** and press <Enter>.

To remove the acceleration, select the accelerated drive/volume, press <R>, and press <Y> to confirm.

To synchronize data from the cache device to the accelerated drive/volume, press <S> and press <Y> to confirm.

5-1-3 Installing the SATA RAID/AHCI Driver and Operating System

With the correct BIOS settings, you are ready to install Windows 7/Vista/XP.

A. Installing Windows 7/Vista

As Windows 7 and Vista already include Intel SATA RAID/AHCI driver, you do not need to install separate RAID/AHCI driver during the Windows installation process. After the operating system is installed, we recommend that you install all required drivers from the motherboard driver disk using "Xpress Install" to ensure system performance and compatibility.

B. Installing Windows XP

Before installing Windows XP, connect a USB floppy disk drive to your computer first because you need to install the SATA RAID/AHCI driver from a floppy disk that contains the driver during the OS installation. Without the driver, the hard drive(s) may not be recognized during the Windows setup process. First, copy the driver from the motherboard driver disk to a floppy disk. Refer to the methods below.

Method A:
  • For the Intel Z68, copy all files in the **\BootDrv\iRST\32Bit** folder to your floppy disk. To install Windows 64-Bit, copy the files in the **64Bit** folder.

Method B:
Steps:
1: Use an alternative system and insert the motherboard driver disk.
2: From your optical drive folder, double click the **Menu.exe** file in the **BootDrv** folder. A Command Prompt window will open similar to that in Figure 1.
3: Insert the blank formatted disk (if you're using a USB floppy disk drive, make sure it is designated as drive A). Select the controller driver by pressing the corresponding letter from the menu and press <Enter>. For example, from the menu in Figure 1,
  • For the Intel Z68, select **8) Intel Rapid Storage driver for 32bit system** for Windows XP 32-bit operating system.
Your system will then automatically copy the driver files to the floppy disk. Press any key to exit when finished.

```
1>Intel Matrix Storage driver for 32bit system
2>Intel Matrix Storage driver for 64bit system
3>GIGABYTE GSATA driver for 32bit system
4>GIGABYTE GSATA driver for 64bit system
5>Marvell AHCI driver for 32bit system
6>Marvell AHCI driver for 64bit system
7>Marvell RAID driver
8>Intel Rapid Storage driver for 32bit system
9>Intel Rapid Storage driver for 64bit system
0>exit
```
Figure 1

Refer to the following for installing the driver during the Windows setup process.

Step 1:

Restart your system to boot from the Windows XP setup disk and press <F6> as soon as you see the message "Press F6 if you need to install a 3rd party SCSI or RAID driver." A screen will then appear asking you to specify an additional SCSI adapter. Press <S>.

Step 2:

For the Intel Z68:

Insert the floppy disk containing the SATA RAID/AHCI driver and press <Enter>. Then a controller menu similar to that in Figure 2 will appear. Select **Intel(R) Desktop/Workstation/Server Express Chipset SATA RAID Controller** and press <Enter>. For AHCI mode, use the up arrow key on the keyboard to scroll to the **Intel(R) Desktop/Workstation/Server Express Chipset SATA AHCI Controller** item and press <Enter>.

Windows Setup

You have chosen to configure a SCSI Adapter for use with Windows, using a device support disk provided by an adapter manufacturer.

Select the SCSI Adapter you want from the following list, or press ESC to return to the previous screen.

Intel(R) ICH7R/DH SATA RAID Controller
Intel(R) ICH7MDH SATA RAID Controller
Intel(R) Desktop/Workstation/Server Express Chipset SATA RAID Controller
Intel(R) Mobile Express Chipset SATA RAID Controller

ENTER=Select   F3=Exit

Figure 2

Step 3:

On the next screen, press <Enter> to continue the driver installation. After the driver installation, you can proceed with the Windows XP installation.

C. Rebuilding an Array

Rebuilding is the process of restoring data to a hard drive from other drives in the array. Rebuilding applies only to fault-tolerant arrays such as RAID 1, RAID 5 or RAID 10 arrays. The procedures below assume a new drive is added to replace a failed drive to rebuild a RAID 1 array. (Note: The new drive must have equal or greater capacity than the old one.)

For the Intel Z68:
Turn off your computer and replace the failed hard drive with a new one. Restart your computer.

• Enabling Automatic Rebuild

Step 1:
When the message "Press <Ctrl-I> to enter Configuration Utility" appears, press <Ctrl> + <I> to enter the RAID Configuration Utility. The following screen appears after you enter the RAID Configuration Utility.

```
              Intel(R) Rapid Storage Technology - Option ROM - 10.5.0.1034
                   Copyright(C) 2003-11 Intel Corporation.  All Rights Reserved.
                              ═══════[ MAIN MENU ]═══════

                  ═══════[ DEGRADED VOLUME DETECTED ]═══════
      "Degraded volume and disk available for rebuilding detected. Selecting
      a disk initiates a rebuild. Rebuild completes in the operating system.

      Select the port of the destination disk for rebuilding (ESC to exit):

 RA           Port Drive Model                    Serial #                    Size
 No           1      WDC WD800JD-22LS        WD-WMAM9W736333            111.7GB

 Ph          ═══════[↑↓]-Previous/Next      [ENTER]-Select       [ESC]-Exit═══════
 Po
 0         ST3120026AS             3JT354CP              111.7GB      Member Disk (0)
 1         WDC WD800JD-22LS        WD-WMAM9W736333       111.7GB      Non-RAID Disk

          [↑↓]-Select                    [ESC]-Exit                  [ENTER]-Select Menu
```

Step 2:
Select the new hard drive to add into the array to be rebuilt and press <Enter>. The following screen appears, indicating that an automatic rebuild will be performed after you enter the operating system (look for the **Intel Rapid Storage Technology** icon in the notification area, which will show that a RAID volume is being rebuilt). If you do not enable automatic rebuild on this stage, you have to manually rebuild the array in the operating system (see the next page for more details).

```

 1       WDC WD800JD-22LS          WD-WMAM9W736333         111.7GB    Member Disk (0)
          Volumes with "Rebuild" status will be rebuilt within the operating system.

          [↑↓]-Select                    [ESC]-Exit                  [ENTER]-Select Menu
```

• Performing the Rebuild in the Operating System

While in the operating system, make sure the chipset driver has been installed from the motherboard driver disk. Then launch the Intel Rapid Storage Technology utility from **All Programs** in the **Start** menu.

Step 1:
Go to the **Manage** menu and click **Rebuild to another disk** in **Manage Volume**.
Step 2:
Select a new drive to rebuild the RAID and click **Rebuild**.

The **Status** item on the left of the screen displays the rebuild progress.

Step 3:
After the RAID 1 volume rebuilding, the **Status** will display as **Normal**.

• **Restoring the Master Drive to a Previous State (for Recovery Volume only)**

When two hard drives are set to Recovery Volume in Update on Request mode, you can restore the master drive data to the last backup state when needed. For example, in case the master drive detects a virus, you can restore the recovery drive data to the master drive.

Step 1:

Select **4. Recovery Volume Options** in the **MAIN MENU** of the Intel RAID Configuration Utility. On the **RE-COVERY VOLUMES OPTIONS** menu, select **Enable Only Recovery Disk** to show the recovery drive in the operating system. Follow the on-screen instructions to complete and exit the RAID Configuration Utility.

Intel(R) Rapid Storage Technology - Option ROM - 10.5.0.1034
Copyright(C) 2003-11 Intel Corporation. All Rights Reserved.

[RECOVERY VOLUME OPTIONS]
1. Enable Only Recovery Disk
2. Enable Only Master Disk

[SELECT RECOVERY VOLUME]

Name	Level	Capacity	Status	Bootable
Volume0	Recovery(OnReq)	111.7GB	NeedsUpdate	Yes

Select a Recovery volume to do the operation.

[↑↓]-Up/Down   [SPACE]-Selects [ENTER]-Done

[↑↓]-select   [ESC]-Previous Menu   [ENTER]-Select

Step 2:

Go to the **Manage** menu of the Intel Rapid Storage Technology utility and click **Recover data** in **Manage Volume**.
The **Status** item on the left of the screen displays the rebuild progress.
Step 3:

Click **Yes** to begin the data recovery.
Step 4:

After the recovery volume is completed, the **Status** will display as **Normal**.

5-2   Configuring Audio Input and Output

5-2-1   Configuring 2/4/5.1/7.1-Channel Audio

The motherboard provides three audio jacks on the back panel which support 2/4/5.1/7.1 (Note)-channel audio. The picture to the right shows the default audio jack assignments.
The integrated HD (High Definition) audio provides jack retasking capability that allows the user to change the function for each jack through the audio driver.

Line In
Front Speaker Out
Mic In
• To install a microphone, connect your microphone to the Mic in jack and manually configure the jack for microphone functionality.
• Audio signals will be present on both of the front and back panel audio connections simultaneously. If you want to mute the back panel audio (only supported when using an HD front panel audio module), refer to instructions on page 92.

High Definition Audio (HD Audio)
HD Audio includes multiple high quality digital-to-analog converters (DACs) that support 44.1KHz/48KHz/96KHz/192KHz sampling rate. HD Audio features multistreaming capabilities that allow multiple audio streams (in and out) to be simultaneously processed. For example, users can listen to MP3 music, have an Internet chat, make a telephone call over the Internet, and etc. all at the same time.

A. Configuring Speakers
(The following instructions use Windows 7 as the example operating system.)

Step 1:
After installing the audio driver, the **HD Audio Manager** icon 🔊 will appear in the notification area. Double-click the icon to access the **HD Audio Manager**.
(Note)   2/4/5.1/7.1-Channel Audio Configurations:
Refer to the following for multi-channel speaker configurations.
• 2-channel audio: Headphone or Line out.
• 4-channel audio: Front speaker out and Rear speaker out.
• 5.1-channel audio: Front speaker out, Rear speaker out, and Center/Subwoofer speaker out.
• 7.1-channel audio: Front speaker out, Rear speaker out, Center/Subwoofer speaker out, and Side speaker out.

The pictures to the right show the 7.1-channel speaker configurations.

7.1-Channel Speakers:

Front Speaker Out

Rear Speaker Out

Center/Subwoofer Speaker Out

Side Speaker Out
Step 2:
Connect an audio device to an audio jack. The **The current connected device is** dialog box appears. Select the device according to the type of device you connect. Then click **OK**.
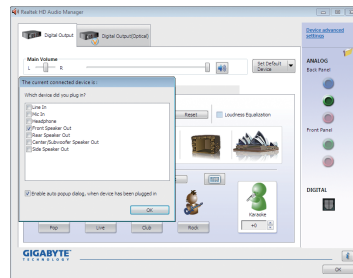

Step 3:
On the **Speakers** screen, click the **Speaker Configuration** tab. In the **Speaker Configuration** list, select **Stereo**, **Quadraphonic**, **5.1 Speaker**, or **7.1 Speaker** according to the type of speaker configuration you wish to set up. Then the speaker setup is completed.
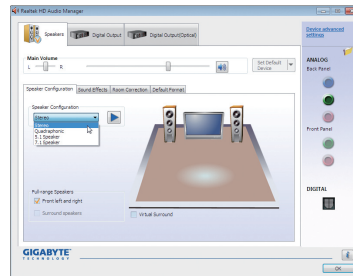

B. Configuring Sound Effect

You may configure an audio environment on the **Sound Effects** tab.

C. Activating an AC'97 Front Panel Audio Module

If your chassis provides an AC'97 front panel audio mod-
ule, to activate the AC'97 functionality, click the tool icon
on the **Speaker Configuration** tab. On the **Connector
Settings** dialog box, select the **Disable front panel jack
detection** check box. Click **OK** to complete.
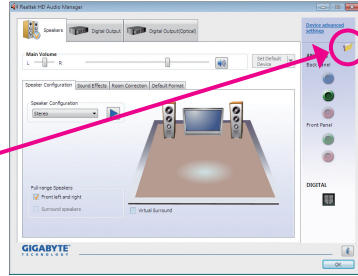

D. Muting the Back Panel Audio (For HD Audio Only)

Click **Device advanced settings** on the top right corner
on the **Speaker Configuration** tab to open the **Device
advanced settings** dialog box. Select the **Mute the rear
output device, when a front headphone plugged in**
check box. Click **OK** to complete.
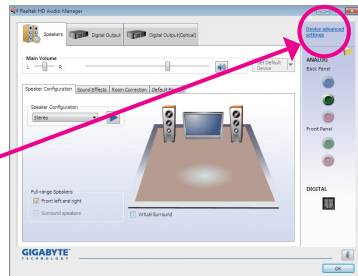

5-2-2   Configuring S/PDIF Out

The S/PDIF Out jack can transmit audio signals to an external decoder for decoding to get the best audio quality.

1. Connecting a S/PDIF Out Cable:

Connect a S/PDIF optical cable to the corresponding S/PDIF out connector as shown below and an external decoder for transmitting the S/PDIF digital audio signals.

Connects to a S/PDIF optical cable
2. Configuring S/PDIF Out:

On the **Digital Output(Optical)** screen (Note), click the **Default Format** tab and then select the sample rate and bit depth. Click **OK** to complete.
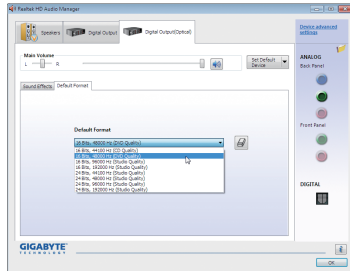

(Note)   Enter the **Digital Output(Optical)** screen to configure further settings if you use the S/PDIF Out connector on the back panel for digital audio output or enter the **Digital Output** screen if you use the internal S/PDIF Out connector (SPDIF_O) for digital audio output.

5-2-3 Configuring Microphone Recording

Step 1:
After installing the audio driver, the **HD Audio Manager** icon will appear in the notification area. Double-click the icon to access the **HD Audio Manager**.
Step 2:
Connect your microphone to the Mic in jack (pink) on the back panel or the Mic in jack (pink) on the front panel. Then configure the jack for microphone function-ality.
Note: The microphone functions on the front panel and back panel cannot be used at the same time.
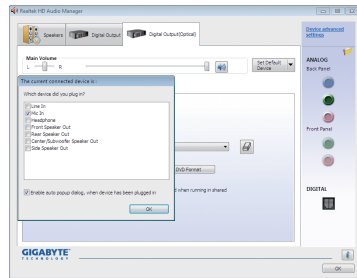

Step 3:
Go to the **Microphone** screen. Do not mute the record-ing volume, or you'll not be able to record the sound. To hear the sound being recorded during the recording process, do not mute the playback volume. It is recom-mended that you set the volumes at a middle level.
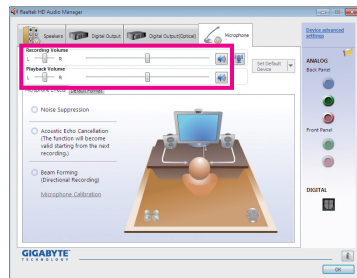

Step 4:
To raise the recording and playback volume for the microphone, click the **Microphone Boost** icon on the right of the **Recording Volume** slider and set the Microphone Boost level.
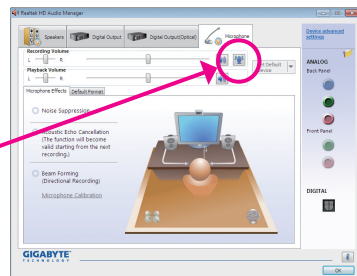

Step 5:
After completing the settings above, click **Start**, point
to **All Programs**, point to **Accessories**, and then click
Sound Recorder to begin the sound recording.

* Enabling Stereo Mix

If the HD Audio Manager does not display the recording device you wish to use, refer to the steps below. The
following steps explain how to enable Stereo Mix (which may be needed when you want to record sound from
your computer).

Step 1:
Locate the   icon in the notification area and right-
click on this icon. Select **Recording Devices**.
Step 2:
On the **Recording** tab, right-click on an empty space
and select **Show Disabled Devices**.

Step 3:
When the **Stereo Mix** item appears, right-click on this
item and select **Enable**. Then set it as the default de-
vice.
Step 4:
Now you can access the **HD Audio Manager** to config-
ure **Stereo Mix** and use **Sound Recorder** to record the
sound.
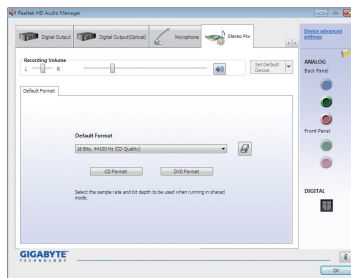

5-2-4 Using the Sound Recorder
A. Recording Sound

1. Make sure you have connected the sound input device (e.g. microphone) to the computer.
2. To record the audio, click the **Start Recording** button ⬤ Start Recording .
3. To stop recording audio, click the **Stop Recording** button ⬛ Stop Recording .

Be sure to save the recorded audio file upon completion.

B. Playing the Recorded Sound

You can play your recording in a digital media player program that supports your audio file format.

5-3 Troubleshooting

5-3-1 Frequently Asked Questions

To read more FAQs for your motherboard, please go to the **Support & Downloads\FAQ** page on GIGABYTE's website.

Q: In the BIOS Setup program, why are some BIOS options missing?
A: Some advanced options are hidden in the BIOS Setup program. Press <Delete> to enter BIOS Setup during the POST. In the Main Menu, press <Ctrl>+<F1> to show the advanced options.

Q: Why is the light of my keyboard/optical mouse still on after the computer shuts down?
A: Some motherboards provide a small amount of standby power after the computer shuts down and that's why the light is still on.

Q: How do I clear the CMOS values?
A: For motherboards that have a CMOS_SW button, press this button to clear the CMOS values (before doing this, please turn off the computer and unplug the power cord). For motherboards that have a clearing CMOS jumper, refer to the instructions on the CLR_CMOS jumper in Chapter 1 to short the jumper to clear the CMOS values. If your board doesn't have this jumper, refer to the instructions on the motherboard battery in Chapter 1. You can temporarily remove the battery from the battery holder to stop supplying power to the CMOS, which will clear the CMOS values after about one minute.

Q: Why do I still get a weak sound even though I have turned my speaker to the maximum volume?
A: Make sure your speaker is equipped with an internal amplifier. If not, try a speaker with power/amplifier.

Q: Why cannot I install the onboard HD audio driver successfully? (For Windows XP only)
A: Step 1: First, make sure Service Pack 1 or Service Pack 2 has been installed (check in My Computer > Properties > General > System). If not, please update it from Microsoft's website. Then make sure the Microsoft UAA Bus Driver for High Definition Audio has been installed successfully (check in My Computer > Properties > Hardware > Device Manager > System Devices).
   Step 2: Check if **Audio Device on High Definition Audio Bus** or **Unknown device** is present in **Device Manager** or **Sound, video, and game controllers**. If yes, please disable this device. (If not, skip this step.)
   Step 3: Then go back to My Computer > Properties > Hardware > Device Manager > System devices and right-click on **Microsoft UAA Bus Driver for High Definition Audio** and select **Disable** and **Uninstall**.
   Step 4: In **Device Manager**, right-click on the computer name and select **Scan for hardware changes**. When the **Add New Hardware Wizard** appears, click **Cancel**. Then install the onboard HD audio driver from the motherboard driver disk or download the audio driver from GIGABYTE's website to install.
   For more details, go to the **Support & Downloads\FAQ** page on our website and search for "onboard HD audio driver."

Q: What do the beeps emitted during the POST mean?
A: The following Award BIOS beep code descriptions may help you identify possible computer problems.
   (For reference only.)

1 short: System boots successfully	1 long, 3 short: Keyboard error
2 short: CMOS setting error	1 long, 9 short: BIOS ROM error
1 long, 1 short: Memory or motherboard error	Continuous long beeps: Graphics card not inserted properly
1 long, 2 short: Monitor or graphics card error	Continuous short beeps: Power error

5-3-2 Troubleshooting Procedure

If you encounter any troubles during system startup, follow the troubleshooting procedure below to solve the problem.

```
                              ┌──────────────┐
                              │    START     │
                              └──────────────┘
                                     │
                                     ▼
        ┌─────────────────────────────────────────────────────┐
        │ Turn off the power. Remove all peripherals, connecting cables, and │
        │ power  cord etc.                                      │
        └─────────────────────────────────────────────────────┘
                                     │
                                     ▼
```

Make sure the motherboard does not short-circuit with the chassis or other metal objects. — Yes → Isolate the short circuit.

No

The problem is verified and solved.

Check if the CPU cooler is attached to the CPU securely. Is the power connector of the CPU cooler connected to the CPU_FAN header properly? — No → Secure the CPU cooler on the CPU. Connect the CPU cooler power cable to the motherboard.

Yes

The problem is verified and solved.

Check if the memory is installed properly on the memory slot. — No → Correctly insert the memory into the memory socket.

Yes

The problem is verified and solved.

Insert the graphics card. Connect the ATX main power cable and the 12V power cable. Turn on the power to start the computer.

Make sure the graphics card is securely seated in the expansion slot and power connectors are firmly attached.

A

(Continued...)

A

When the computer is turned on, is the CPU cooler running? — No → The power supply, CPU or CPU socket might fail.

Yes ← The problem is verified and solved.

Check if there is display on your monitor. — No → The graphics card, expansion slot, or monitor might fail.

Yes ← The problem is verified and solved.

Turn off the computer. Plug in the keyboard and mouse and restart the computer.

Check if the keyboard is working properly. — No → The keyboard or keyboard connector might fail.

Yes ← The problem is verified and solved.

Press <Delete> to enter BIOS Setup. Select "Load Fail-Safe Defaults" (or "Load Optimized Defaults"). Select "Save & Exit Setup" to save changes and exit BIOS Setup.

Turn off the computer and connect the IDE/SATA devices. Check if the system can boot successfully. — No → The IDE/SATA device, connector, or cable might fail.

Yes ← The problem is verified and solved.

Reinstall the operating system. Reinstall other devices one by one (install one device at one time and then boot the system to see if the device works successfully).

END

If the procedure above is unable to solve your problem, contact the place of purchase or local dealer for help. Or go to the **Support & Downloads\Technical Support** page to submit your question. Our customer service staff will reply you as soon as possible.
